

**PONDICHERY UNIVERSITY**  
**BACHELOR OF TECHNOLOGY PROGRAMMES**  
**(EIGHT SEMESTERS)**

**REGULATIONS**

Approved by 17<sup>th</sup> Board of Studies (Engineering) meeting  
**(Operated from the Academic Year 2003-2004)**

**1. Conditions for Admission :**

- (A)** Candidates for admission to the first semester of the 8 semester B.Tech Degree programme should be required to have passed.

The Higher Secondary Examination of the (10+2) curriculum (Academic Stream) prescribed by the Government of Tamil Nadu / or any other examination equivalent there to with minimum of 40% marks ( a mere pass for SC/ST candidates) in aggregate of subjects – Mathematics, Physics and Chemistry.

**OR**

An Examination of any University or Authority recognised by the Executive Council of the Pondicherry University as equivalent thereto.

- (A)** Lateral Entry for Diploma passed candidates for admission to third semester of the eight semester B.Tech programme should be required to have passed three year diploma or four year sandwich diploma course in engineering/technology with a minimum of 60% marks in aggregate in the subjects covered in 3<sup>rd</sup> to 6<sup>th</sup> semester ( a mere pass for SC/ST candidates). A list of diploma programmes approved for admission for each of the degree programme is given in **Annexure – A**.

**2. Age Limit :**

The candidate should not have completed 21 years of age as on 1<sup>st</sup> July of the academic year under consideration. For Lateral Entry admission to second year of degree programme candidates, should not have completed 24 years as on 1<sup>st</sup> July of the academic year under consideration. In the case of SC/ST candidates, the age limit is relaxable by 3 years for both the cases.

### 3. Duration of Programme :

The Bachelor of Technology degree programme shall extend over a period of 8 consecutive semesters spread over 4 academic years – two semesters constituting one academic year. The duration of each semester shall normally be 15 weeks excluding examinations.

### 4. Eligibility for the award of Degree :

No candidate shall be eligible for the award of the degree of Bachelor of Technology, unless he/she has undergone the course for a period of 8 semesters (4 academic years) / 6 semesters (3 academic years for Lateral Entry candidates) in the faculty of Engineering and has passed the prescribed examinations in all the semesters.

### 5. Branches of Study :

Branch I	- Civil Engineering
Branch II	- Mechanical Engineering
Branch III	- Electronics & Communication Engineering
Branch IV	- Computer Science & Engineering
Branch V	- Electrical & Electronics Engineering
Branch VI	- Chemical Engineering
Branch VII	- Electronics & Instrumentation Engineering
<b>Branch VIII - Information Technology</b>	
Branch IX	- Instrumentation & Control Engineering
Branch X	- Mechatronics

or any other branches of study as and when offered. The branch allocation shall be ordinarily done at the time of admission of the candidate to the first semester.

### 6. Subjects of Study :

The subjects of study shall include theory and practicals as given in the scheme of examination and shall be in accordance with the prescribed syllabus. The subjects of study for the first two semesters shall be common for all branches of study.

### 7. Examinations :

The theory and practical examinations shall comprise continuous assessment throughout the semesters in all subjects as well as university examinations conducted by Pondicherry University at the end of the semester (November / December or April / May).

**(a) Courses for which there is a written paper of 75 marks in the university examination.**

The Internal Assessment marks of 25 has to be distributed as 10 marks each for two class tests and 5 marks for class attendance in the particular subject. The distribution of marks for attendance is as follows.

- 5 marks for 95% and above
- 4 marks for 90% and above but below 95%
- 3 marks for 85% and above but below 90%
- 2 marks for 80% and above but below 85%
- 1 mark for 75% and above but below 80%

In total three tests are to be conducted and the better two are to be considered for assessment.

**(b) Practicals for which there is a university practical examination of 50 marks:**

The internal assessment marks of 50 has to be distributed as 20 marks for the periodic practical works and records submitted thereof, 15 marks for an internal practical examination, 5 marks for an internal viva voce, and 10 marks for class attendance in the particular subject. The distribution of marks is as given below.

- 10 marks for 95% and above
- 8 marks for 90% and above but below 95%
- 6 marks for 85% and above but below 90%
- 4 marks for 80% and above but below 85%
- 2 marks for 75% and above but below 80%

**8. Requirement for appearing for University Examination :**

A candidate shall be permitted to appear for university examinations at the end of any semester only if:

(i) He / She secures not less than 75% overall attendance arrived at by taking into account the total number of periods in all subjects put together offered by the institution for the semester under consideration.

( Candidates who secure overall attendance greater than 60% and less than 75% have to pay a condonation fee as prescribed by University along with a medical certificate obtained from a medical officer not below the rank of Asst. Director )

(i) He / She earns a progress certificate from the Head of the institution for having satisfactorily completed the course of study in all the subjects pertaining to that semester.

(i) His / Her conduct is found to be satisfactory as certified by the Head of the institution. A candidate who has satisfied the requirement (i) to (iii) shall be deemed to have satisfied the course requirements for the semester.

(ii) In addition, the candidate shall satisfy the following conditions.

(a) To be permitted to register for courses in 5<sup>th</sup> semester, the candidate should have earned a minimum of 30 credits for the I & II semesters put together.

(b) To be permitted to register for the courses in 7<sup>th</sup> semester, the candidate should have completed all credit requirements for the I and II semester and 30 credits for the 3<sup>rd</sup> and 4<sup>th</sup> semesters put together.

### **2. Procedure for completing the course :**

A candidate can join the course of study of any semester only at the time of its normal commencement and only if he/she has satisfied the course requirements for the previous semester and further has registered for the university examinations of the previous semester in all the subjects as well as all arrear subjects if any.

However, the entire course should be completed within 14 consecutive semesters.

### **3. Passing Minimum and Classification of Successful Candidates :**

(i) A candidate shall be declared to have passed the examination in a subject of study only if he/she secures not less than 50% of the total marks (Internal Assessment plus University examination marks) and not less than 40% of the marks in University examination.

(ii) A candidate who has been declared "Failed" in a particular subject may reappear for that subject during the subsequent semesters and secure a pass. However, there is a provision for reevaluation of failed or passed subjects provided he/she fulfills the following norms for reevaluation.

## Curriculum & Syllabi (Information Technology)

---

- (a) Applications for reevaluation should be filed within 4 weeks from the date of declaration of results or 15 days from the date of receipt of marks card whichever is earlier.
- (b) The candidate should have attended all the college examinations as well as university examination.
- (c) If a candidate has failed in more than two papers in the current university examination, his/her representation for reevaluation will not be considered.
- (d) The request for reevaluation must be made in the format prescribed duly recommended by the Head of the Institution along with the reevaluation fee prescribed by the University.

The internal assessment marks obtained by the candidate shall be considered only in the first attempt for theory subjects alone. For the subsequent attempts, University examination marks will be made upto the total marks. Further the University examination marks obtained in the latest attempt shall alone remain valid in total suppression of the University examination marks obtained by the candidate in earlier attempts.

### (i) AWARD OF LETTER GRADES

The assessments of a course will be done on absolute marks basis, however, for the purpose of reporting the performance of a candidate, letter grades, each carrying certain points, will be awarded as per the range of total marks (out of 100) obtained by the candidate, as detailed below:

Range of Total Marks	Letter Grade	Grade Points
90 to 100	S	10
80 to 89	A	9
70 to 79	B	8
60 to 69	C	7
55 to 59	D	6
50 to 54	E	5
0 to 49	F	0
Incomplete	FA	

**F Denotes failure in the course.**

## Curriculum & Syllabi (Information Technology)

---

FA denotes absent / detained as per clause 8. After results are declared, Grade Sheets will be issued to the students. The grade sheets will contain the following details:

- (a) The college in which the candidate has studied.
- (b) The list of courses enrolled during the semester and the grades scored.
- (c) The Grade Point Average (GPA) for the semester and The Cumulative Grade Point Average (CGPA) of all enrolled subjects from first semester onwards.
- (d) GPA is the ratio of sum of the products of the number of credits of courses registered and the corresponding grades points scored in those courses, taken for all the courses and sum of the number of credits of all the courses

$$\text{GPA} = \frac{\text{Sum of [c x GP]}}{\text{Sum of C}}$$

CGPA will be calculated in a similar manner, considering all the courses enrolled from first semester, 'F' FA grades are to be excluded for calculating GPA and CGPA.

- (iv) A candidate who satisfies the course requirements for all semesters and who passes all the examinations prescribed for all the eight semesters within a **MAXIMUM PERIOD OF 7 YEARS** reckoned from the commencement of the first semester to which the candidate was admitted shall be declared to have qualified for the award of degree.
- (v) A candidate who qualifies for the award of the degree passing in all subjects pertaining to semesters 3 to 8 in his/her first appearance within 6 consecutive semesters ( 3 academic years ) and in addition secures a CGPA of 8.50 and above for the semesters 3 to 8 shall be declared to have passed the examination in **FIRST CLASS** with **DISTINCTION**.
- (vi) For the Award of University ranks and Gold Medal for each branch of study, the CGPA secured from 3<sup>rd</sup> to 8<sup>th</sup> semester alone should be considered. Rank certificates would be issued to the first ten candidates in each branch of study
- (vii) A candidate who qualifies for the award of the degree by passing in all subjects relating to semesters 3 to 8 within a maximum period of 8 semesters after his/her commencement of study in the third semester and

in addition secures CGPA not less than 6.5 shall declared to have passed the examination in **FIRST CLASS**.

(viii) All other candidates who qualify for the award of degree shall be declared to have passed the examination in **SECOND CLASS**.

#### **4. Provision for withdrawal :**

A candidate may, for valid reasons, and on the recommendations of the Head of the Institution be granted permission by the University to withdraw from writing the entire semester examination as one Unit. The withdrawal application shall be valid only if it is made earlier than the commencement of the last theory examination pertaining to that semester. Withdrawal shall be permitted only once during the entire course. Other conditions being satisfactory, candidates who withdraw are also eligible to be awarded. **DISTINCTION** whereas they are not eligible to be awarded a rank.

#### **5. Discontinuation of Course :**

If a candidate wishes to temporarily discontinue the course for valid reasons, he/she shall apply through the Head of the Institution in advance and obtain a written order from the University permitting discontinuance. A candidate after temporary discontinuance may rejoin the course only at the commencement of the semester at which he/she discontinued, provided he/she pays the prescribed fees to the University. The total period of completion of the course reckoned from the commencement of the first semester to which the candidate was admitted shall not in any case exceed 7 years, including of the period of discontinuance.

#### **6. Revision of Regulations and Curriculum :**

The University may from time to time revise, amend or change the regulations of curriculum and syllabus as and when found necessary.

**ANNEXURE – A**

B.Tech courses in which admission is sought	Diploma courses eligible for admission
Civil Engineering	Civil Engineering Civil and Rural Engineering Architectural Assistantship Architecture Civil Engineering (Sandwich)

**UCC 0041 COMPUTER PROGRAMMING**

**UNIT – I**

Introduction to basic concepts of Hardware/Software – System Software – Application Software – Low level and High level Languages – CAD/CAM – Graphics – AutoCAD – LAN-MAN-WAN – Internet and Intranet.

**UNIT – II**

Fundamentals of C Programming:– Sample 'C' Program. Introduction to Data types: – Identifier, keyword, data type, ASCII, variables, constants. Input/output:– Printf, Scanf, format string - escape sequences. Operators and constructs: – Relational, logical, conditional operators, expression, statements, if, else if, shorthand operators.

**UNIT III**

Loops - Functions –Recursion – String handling – Programming examples -Type conversion.

**UNIT IV**

Storage class specifiers – User defined data types – Enumerated data types, typedef – Structures – Union.

**UNIT V**

C Preprocessor – Pointers – File handling - problems using these concepts

**Text Books:**

1. Subburaj. R, Programming in C, Vikas Publishing House Pvt Ltd., First Edition, 2000.
2. Balagurusamy. E, Programming in ANSI C, Tata McGraw Hill, Second Edition, 2002.

## UCC 1202 MATHEMATICS - I

### UNIT-I

APPLICATION OF DIFFERENTIATION: Sub tangent and subnormal – Curvature, evolutes and involutes.

INTEGRAL CALCULUS: Properties of definite integrals – Reduction formulae for  $x^n e^{ax}$ ,  $\sin^n(x)$ ,  $\cos^n(x)$ ,  $\tan^n(x)$ ,  $\sin^m(x) \cos^n(x)$ ,  $x^n \sin(ax)$ , and  $x^n \cos(ax)$ .

### UNIT –II

MULTIPLE INTEGRALS AND APPLICATIONS: Multiple integrals – change of order of integration. Applications: Areas and volumes (Cartesian and polar) – mass and center of mass (constant and variable densities).

### UNIT-III

ANALYTICAL SOLID GEOMETRY: Directional cosines and ratios – angle between two lines – the equation of plane - equations to a straight line and shortest distance between two skew lines.

### UNIT-IV

DIFFERENTIAL EQUATIONS: Exact equations, First order linear equations, Bernoulli's equation, orthogonal trajectories, growth and decay, geometrical applications and electric circuits. Equations not of first degree: equations solvable for  $p$ , equations solvable for  $y$ , equations solvable for  $x$  and Clairaut's type.

### UNIT-V

DIFFERENTIAL EQUATIONS(Higher order): Linear differential equations of higher order – with constant coefficients, the operator  $D$  - Euler's linear equation of higher order with variable coefficients - simultaneous linear differential equations – solution by variation of parameters method – simple applications to electric circuits.

### UCC 1213 PHYSICS – I

#### Unit I – Optics

*Interference:* Newton's rings – Michelson's interferometer – wavelength determination – interference filter – antireflection coatings. *Diffraction:* diffraction grating – resolving power of grating & prism. *Polarization:* Fresnel's theory of double refraction – quarter and half wave plates – Optical Rotation.

#### Unit II – Acoustics

*Ultrasonics:* ultrasonic waves productions and detections – piezoelectric – magnetostriction – NDT applications. *Acoustics of auditoria:* – Sabine's formula – Reverberation time.

#### Unit III – Wave mechanics

Matter waves – de Broglie wavelength – uncertainty principle – Schroedinger wave equation – time dependent – time independent – application to particle in a box – barrier penetration – tunneling effect – tunnel diode.

#### Unit IV – Nuclear energy source

Binding energy – mass defect – packing fraction – mass and binding energy – disintegration in fission – fission and fusion – nuclear reactor – PHWR – FBTR – materials used in nuclear reactors.

#### Unit V – Lasers

Principles of Laser – Einstein's Coefficients – Threshold Conditions – Optical resonators – *Solid State laser:* NdYAG – *Gas Laser:* CO<sub>2</sub> laser – Dye laser, *Semiconductor Laser:* GaAs Laser – *Laser in NTD:* Holographic Interferrometry, Single and Double exposure

## UCC 1224 CHEMISTRY

### UNIT I WATER

Hardness of water – units and calcium carbonate equivalent.  
Determination of hardness of water – O – Hehner's method.  
Disadvantages of hardwater – boiler scale and sludge, caustic embrittlement, priming & foaming and boiler corrosion.  
Water softening method – lime-soda process, zeolite process and Ion exchange process

### UNITII HIGH POLYMERS

Monomers – functionality, degree of polymerization -Tacticity -  
Addition & Condensation Polymerization – Molecular weight distribution.  
Polymerization techniques - Thermoplastics and Thermosets -  
Preparation, properties and uses of Polyester, Teflon, nylon 6,6, PVC, Bakelite.  
Polymer composites - Fibre reinforced plastics.

### UNIT-III ELECTROCHEMICAL CELLS

Galvanic cells, Single electrode potential, Standard electrode potential. Elctromotive series. EMF of a cell and its measurement.  
Nernst equation. Electrolyte Concentration cell. Reference electrodes - Hydrogen, Calomel & Glass electrodes.  
Batteries - Primary and secondary cells, laclanche cell, lead acid storage cell & Ni-Cd battery.  
10 hrs

### UNIT-IV CORROSION AND ITS CONTROL

Chemical and Electrochemical corrosion. Types of corrosion-Galvanic, pitting, concentration cell corrosion. Passivity. Corrosion control Methods - Cathodic protection and corrosion inhibitors.  
Protective coatings: Types of protective coatings-Metallic coating, - cladding, electroplating and anodizing.

### UNIT-V PHASE RULE

Phase rule-definition and explanation of terms in phase rule.  
Water, lead -silver alloy system, copper – nickel alloy system and iron-carbon alloy system

### TEXT BOOKS

1. P C Jain and Monika Jain, "Engineering Chemistry" Dhanpat Rai and Sons, New Delhi, 2000
1. S S Data, "A Textbook of Engineering Chemistry" S Chand & Co., Ltd., New Delhi.

**UCC 0135 – ELEMENTS OF ELECTRICAL AND  
ELECTRONICS ENGINEERING**

**ELECTRICAL:**

**PART – A**

**UNIT – I**

Active and passive elements - review of Kirchoff's laws – star/delta conversion – equivalent resistance – Node and mesh methods of analysis of DC circuits.

**UNIT – II**

Concepts of AC circuits – rms value, average value, form and peak factors – real and reactive power – power factor – Node and mesh analysis of AC circuits.

**UNIT – III**

Introduction to three phase balanced circuits – two watt meter method of power measurement – Principle of DC generator, DC motor, Transformer and single phase motor.

**ELECTRONICS:**

**PART - B**

**UNIT – I**

Solid state devices - characteristic of diode, BJT, FET,UJT and SCR – RC coupled amplifier- Principle of Hartley oscillator and RC phase – shift oscillator – Introduction to IC.

Transducers – Linear variable differential transformer (LVDT, Strain gauge, Tachogenerator, Resistance Temperature Detector (RTD), Thermocouple, Thermistor, Piezoelectric transducer.

**UNIT – II**

Boolean algebra – reduction of Boolean expressions – De-Morgan's theorem logic gates – Implementation of Boolean expressions – flip - flops RS, JK, T and D – combinational logic - Half adder, Full adder and subtractors – Principle of counters and registers

**UNIT – III**

Model of a communication system – Types of electrical communication channel- wire and wireless channel – wire, Coaxial cable and optical fiber – Microwave radio link and satellite link. Advantage of Digital Communication – Overview of ISDN.

**TEXT BOOKS:**

1. R. Muthusubramanian, S Salivahanan, and K A Muraleedharan, "Basic Electrical, Electronics and Computer Engineering", Tata McGraw Hill, New Delhi, 2000.

**UCC 0026 THERMODYNAMICS**

UNIT I : BASIC CONCEPTS AND DEFINITIONS

Energy conversion and efficiencies - System, property and state - Thermal equilibrium - Temperature - Zeroth law of Thermodynamics.

UNIT II : FIRST LAW OF THERMODYNAMICS

The concept of work and adiabatic process - First law of thermodynamics - Conservation of Energy principle for closed and open systems - Calculation of work for different processes of expansion of gases

UNIT III : SECOND LAW OF THERMODYNAMICS

Equilibrium and the second law - Heat engines - Kelvin-Planck statement of second law of thermodynamics - Reversible and irreversible processes - Carnot principle - Clausius inequality- Entropy

UNIT IV : GAS POWER CYCLES

Air standard cycles: The air standard Carnot cycle - Air standard Otto cycle, diesel cycle, dual cycle and Bryton cycles and their efficiencies

UNIT V : REFRIGERATION CYCLES AND SYSTEMS

Reverse Carnot cycle - COP - Vapor compression refrigeration cycle and systems - Gas refrigeration cycle - Absorption refrigeration system - Liquifaction and solidification of gases

Text Books :

1. **Nag,P.K., "Engineering Thermodynamics", 2<sup>nd</sup> edition, Tata Mc Graw Hill Publishing Co. Ltd., New Delhi,1995**
2. Wark, K., "Thermodynamics", 4<sup>th</sup> edition ,Mc Graw Hill, N.Y.,1985

Reference Books :

1. Arora, C.P., "Thermodynamics" , Tata Mc Graw Hill Publishing Co. Ltd., New Delhi,1998.
2. Burghardt, M.D., "Engineering Thermodynamics with Applications", 4<sup>th</sup> edition, Harper & Row, N.Y., 1986.
3. Huang, F.F., "Engineering Thermodynamics" 2<sup>nd</sup> edition , Macmillan Publishing Co. Ltd., N.Y.,1989.
4. Van Wylen, G.J and R.E Sonntag., "Fundamental of Classical Thermodynamics", 4<sup>th</sup> edition, John Wiley & Sons , 1994.
5. Cengel, Y.A. and Boles, M.A., 1989, "Thermodynamics - An Engineering Approach", Mc-Graw Hill.

**UCC 0047 COMPUTER PROGRAMMING LAB (0 0 3 2)**

There are three cycles of experiments. Write C programs to solve the problems wherever required.

**CYCLE I - BASIC CONCEPTS**

1. Study of Turbo C IDE – Compilation and execution using simple C Programs – Simple OS Interface/ commands.
2. Solve quadratic equation for various possible inputs.
3. Generation of all prime numbers in a given range. (Using iteration construct).
4. Sort given array of numbers and names.
5. Matrix operations (addition, subtraction, transpose)

**CYCLE II - STRUCTURES AND FILES**

6. Create an array of structures for student information with the following details:
  - Name -
  - DOB -
  - Age
  - Marks - percentage or CGPA
  - Roll No. -
  - Gender -
  - i. Compute the overall pass percentage of the class.
  - ii. List of the students roll numbers who failed in the current semester.
  - iii. Compute the average
  - 1v. Given a name, print the marks and other details.
7. Using files implement the above problem and print the mark sheet of each student after storing structure information in an input file. Also read the input file and create two output files containing male student information and female student information separately.
8. Develop the following functions to perform matrix multiplication:
  - i. Read any given general matrix
  - ii. Print a given matrix
  - iii. Identify the compatibility
  - iv. Multiplication of two matrices
9. Recursive program to
  - i. Find Factorial of a number
  - i. Generate Fibonacci Series.

### CYCLE III - APPLICATIONS

10. Using AutoCAD,
- Draw a National flag/house/car/layout of a street using basic objects.
  - Create a village layout and manipulate it with different edit commands.
11. Using MS WORD,
- Prepare a practical experiment report for any one of Physics experiments. (report should include diagrams, tables, formulae, using mathematical symbols.)
  - Prepare a letter containing the facilities available in a department addressed to N companies (using mail merge).
12. The placement data from the year 1996 to 2001 of Pondicherry Engineering College is given in the following table.

Year	Number of Students placed
1996	168
1997	179
1998	272
1999	245
2000	292
2001	192

- Using extrapolation method, find the expected number of students to be placed in the year 2005.
13. To identify the position of a pendulum at a given time instant after formulating equation for simple pendulum.
14. Accept a chemical equation and check whether it is balanced or not.
15. To Count the number of words and sentences in a given paragraph.

## UCC 0231 – TECHNICAL ENGLISH

### UNIT – I - BASIC COMMUNICATION THEORY

**Communication as sharing; context of communication; the speaker/writer and the listener/reader; medium of communication; barriers to communication; accuracy, brevity, clarity and appropriateness in communication.**

### UNIT – II READING

Comprehension of technical and non-technical material, skimming, scanning, Inferring, Guessing, the meaning of words from contexts, Note making and extension of vocabulary, predicting and responding to context.

**Include Intensive Reading.**

### UNIT – III WRITING

Effective sentences, Cohesive writing, Clarity and Conciseness in writing, Introduction to technical writing, Better paragraphs, Definition, Description, Practice in summary writing.

**Include I. Four modes of writing – Description, Narration, Exposition and Argument.**

**II. Use of dictionaries, Library references, Use of indices. Making bibliographical entries with regard to sources from books, journals, internet, etc. Developing reference skills relating to note taking, collating information and organizing it.**

### UNIT IV WRITTEN COMMUNICATION

Report writing – informal and formal reports, Memoranda, Notice, Instruction.

**Include: Business Letters, Resumes, Job Applications.**

### UNIT V - SPEAKING

Features of effective speech, practice in speaking fluently, Dialogue practice, Simple social exchanges, short extempore.

**Include : Basics in Phonetics, Group Discussions and Presentations.**

**Importance of Listening Skills.**

#### **Text Books :**

0. Boove, Courtland R, et al. Business Communication Today. Delhi: Pearson Education, 2002.
0. Lakshminarayanan, K.R. English for Technical Communication, Chennai: Scitech Publication, 2001.

#### **Reference Books:**

1. Davis, Llyod and Susan McKay, Structures and Strategies. Hyderabad; Universities Press, 1999.

2. Jones, Daniel, Everyman's English Pronunciation Dictionary, New Delhi; Universal Book Stall, 2001.

## **UCC 0028 ENGINEERING GRAPHICS**

### **Unit 0**

Introduction to Standards for Engineering Drawing practice, Lettering, Line work and Dimensioning

### **Unit I**

Conic sections, Involute, Spirals, Helix. Projection of Points, Lines and Planes

### **Unit II**

Projection of Solids and Sections of Solids.

### **Unit III**

Development of surfaces - Intersection of surfaces (cylinder-cylinder, cylinder-cone)

### **Unit IV**

Isometric projections and Orthographic projections

### **Unit V**

Computer Aided Drafting: Introduction to Computer Aided Drafting hardware - Overview of application software - 2D drafting commands (Auto CAD) for simple shapes - Dimensioning.

### **TEXT BOOKS:**

1. K.R. Gopalakrishna, A Text Book of Engineering Drawing, Vol. I & II
2. K.V. Natarajan, A Text Book of Engineering Drawing.
3. BIS, Engineering Drawing practice for Schools & College.

### **REFERENCES:**

1. N.D. Bhatt, Engineering Drawing.
2. K. Venugopal, Engineering Drawing.
3. Warren. T. Luzadder, Fundamentals of Engineering Drawing.
4. David I cook and Robert N Mc Dougal, Engineering Graphics and Design with computer applications, Holt – Sounders Int. Edn. 1985.
5. James D Bethune and et al., Modern Drafting, Prentice Hall Int., 1989.

**UCC 0059 - BASIC ELECTRICAL AND ELECTRONICS LAB**

**List of Experiments**

**Electrical:**

1. Study of tools and accessories
2. Study of joints
3. Staircase wiring
4. Doctor's room wiring
5. Godown wiring
6. Tube Light and Fan connection
7. Lamp controlled from three different places-wiring

**Electronics:**

1. Study of Analog and digital instruments
2. Study of CRO
1. Calibration of Voltmeter and Ammeter
2. Calibration of Energy meter and Wattmeter
3. Verification of Kirchoff's laws
4. Characteristics study of transducers (LVDT, Straingauge, thermocouple)
5. Digital Logic Gates

**UCC 2202 MATHEMATICS - II**

Unit I

ALGEBRA: Binomial, exponential and logarithmic series (without proof) – problems on summation, approximation and coefficients.

Unit II

MATRICES: Inverse of matrix by row transformation – Eigen values and Eigen vectors - Cayley-Hamilton theorem (without proof) – Diagonalisation – rank of matrix – solution of a general system of  $m$  linear algebraic equations in  $n$  unknown ( $m \leq n$ ).

Unit III

TRIGONOMETRY: Expansions for  $\sin(n\theta)$ ,  $\cos(n\theta)$ ,  $\tan(n\theta)$ ,  $\sin^n(\theta)$ ,  $\cos^n(\theta)$ . Exponential, circular, hyperbolic, inverse hyperbolic and logarithmic functions of a complex variable – separation of real and imaginary parts. (Sec.6.1 to 6.3, 6.5 in Chapter6 and Chapter 7 in the Text Book given below)

Unit IV

VECTOR ANALYSIS: Scalar fields and Vector fields – Gradient, Divergence and Curl – their properties and relations – Gauss and Stokes theorems (without proof), simple problems for their verification.

Unit V

**STATISTICS: Moments, kurtosis and skewness based on moments only. Probability distributions: Binomial, Poisson and Normal - evaluation of statistical parameters for these three distributions. Correlation and regression – rank correlation.**

**Text Book:**

Dr.M.K.Venkataraman, Engineering Mathematics (First Year), Second Edition, The National Publishing Company, Madras, July 2001.

**Reference Book:**

P. Kandasamy, K. Thilagavathy and K. Gunavathy, Engineering Mathematics, Volume-I, Second Edition, S. Chand and Company Ltd., New Delhi, 1996.

UCC 2213 Material Science

**Unit I - Crystal structure and x – ray diffraction**

Miller indices – Bravais lattices – unit cell – reciprocal lattice vector – Atomic packing fraction – Debye–Scherrer X– ray Diffraction method – co-ordination number – radius of atom and size of cell.

**Unit II – Defects**

Point defects – Qualitative ideas of point, line and volume defects - Lattice vibration – Specific heat of solids – Einstein’s-Debye’s Theory – Thermal conductivity in metals

**Unit III – Dielectric properties**

Dielectric Polarization and Mechanism – Clausius-Mossotti relation – Dielectric constant measurements – Temperature and frequency dependence of dielectric constant – Dielectric loss – Measurement of Dielectric constant and loss using Scherring bridge – Elementary ideas of Piezoelectrics, ferroelectrics and pyroelectric materials and its applications

**Unit IV – Magnetic Properties**

Classification of Magnetic Materials – Quantum Theory of Ferro and Anti-ferromagnetism – hysteresis curves and parameters – Curie temperature – domain theory – magnetic anisotropy – soft and hard magnetic materials – magnetic bubble – memory devices - Magnetic circuits

**Unit V – Semiconductors and superconductors**

Compound semiconductors – Hall effect – origin of energy band and energy gap – Kronig penny model – Basic concepts superconductivity – transition temperature – Meissner effect – Type I and II superconductors – high temperature superconducting materials – 123 superconductor.

**Text books**

1. Materials Science – M Arumugam, Anuratha Printers, 1994.
2. Solid State Physics – S.O Pillai – Wiley Easton, 1994.

**Reference**

- 1 Solid State Physics – C Kittel 7<sup>th</sup> Edition – Wiley Eastern Ltd., 1987
- 2 Science of Engg. Materials – C M Srivastava – Wiley Eastern Ltd., 1987
- 3 Elementary Physics – M Ali Omar – Addison Sesley Publishing Co.India,1990.

## UCC 2224 ENVIRONMENTAL SCIENCE

### Unit I

Environmental segments – brief outline. Pollution – Definition – classification. Pollutants – classification of pollutants.

**Air pollution–I - Reactions in atmosphere – Sources of air pollution – Gaseous pollutants – oxides of nitrogen, oxides of sulfur, oxides of carbon, hydrocarbons and particulates.**

### Unit II

Air pollution II – Greenhouse effect – Sources - Effect on Global climate-consequences. Chlorofluoro carbons- (CFC). Ozone depletion – Cause -Mechanism-Effects on environment. Smog-Sulfurous or London Smog – Photochemical Smog or Los Angeles Smog –Effects on environment.

Acid rain – Theory of acid rain – Effects.

### Unit III

**Water pollution – Types of water pollution–Sources-Classification of water pollutants cause and effect of :- (i) Inorganic pollutants and toxic metals, (ii) Organic pollutants, (iii) Radioactive pollutants and (iv) Pesticides.**

### Unit IV

Pollution monitoring and control methods - Air pollution - Analysis of CO<sub>x</sub>, NO<sub>x</sub>, SO<sub>x</sub>, H<sub>2</sub>S, Hydrocarbons, particulate matter.

Water pollution. Monitoring pH, Dissolved oxygen –Winkler's method - BOD, COD, TOC.

### Unit V

Noise pollution – Sound levels – Sources of Noise – Effects of Noise – Noise Limits – Some control measures

**Basic concept of Environmental impact assessment – Types of impact – Quantifying specific impact – Elementary aspects of impact identification and evaluation.**

#### TEXT BOOKS:

1. Anil Kumar De, "Environmental Chemistry", 3<sup>rd</sup> Edition, New Age International (P) Ltd., Publishers, New Delhi (1996)
2. B K Sharma, "Environmental Chemistry" GOEL Publishing House, Meerut, (2000).

#### REFERENCE BOOKS:

1. Gilbert M. Masters, "Introduction to Environmental Engineering and Science", Prentice-Hall of India Pvt. Ltd., New Delhi, (1994).

3. A textbook in Environmental Science, V Subramanian, Narosa Publishing House, New Delhi.

**UCC0125 Basic Engineering**

**Part-A CIVIL ENGINEERING.**

**Unit I**

**Buildings, Building Materials**

Buildings-Definition-Classification according to NBC-plinth area, Floor area, carpet area, floor space index-construction materials-stone, brick, cement, cement-mortar, concrete, steel- their properties and uses.

**UNIT II**

**Buildings and their components:**

Buildings-Various Components and their functions.

Soils- classification and methods of improving bearing capacity of soils.

Foundations-Functions and classification.

Masonry-Types of stone and brick masonry.

Flooring-functions and types-cement, concrete, mosaic, granolithic-marble, timber and granite flooring.

Roofs-Flat roofs - steel trusses - roof covering.

**Unit III**

**Utilities and Services:**

Surveying-classification, general principles of surveying – Basic terms and definitions in chain, compass, leveling surveying and uses of surveying – definition, characteristics and uses of contours.

Roads-types, Water bound macadam road, cement concrete road, bituminous road.

Bridges-types, T-beam, steel, arch, culvert and causeway.

Dams-Purpose, selection of site, types of dams - gravity and earthen dams..

Water supply-sources-surface and ground water quality and quantity requirements.

Rainwater harvesting.

**Text Book:**

## UCC 0125 BASIC ENGINEERING

### PART-B MECHANICAL ENGINEERING

#### Unit IV

##### **INTERNAL AND EXTERNAL COMBUSTION SYSTEMS:**

Working principles of IC engines – Classification – Diesel and petrol engines: two stroke and four stroke engines. Steam generators(Boilers) – Classification – Constructional features (of only low pressure boilers) – Boiler mountings and accessories.

##### **CONVENTIONAL POWER GENERATION SYSTEMS:**

Hydraulic, steam and gas turbines power plants – Schemes and layouts – Selection criteria of above power plants.

#### Unit -V

##### **NON-CONVENTIONAL ENERGY SYSTEMS (Description only)**

Solar thermal systems – Solar photovoltaic – Solar pond – wind, wave, tidal, geothermal and ocean thermal energy conversion systems.

##### **CASTING:**

Green and dry sand moulding processes for ferrous and non-ferrous metals – applications.

#### Unit – VI.

##### **METAL JOINING:**

Elements of arc and gas welding, brazing and soldering – Bolted joint types – Adhesive Bonding; classification of adhesives – applications.

##### **SHEET METAL PROCESSING:**

Punching, blanking, shearing, bending, and deep drawing processes; descriptions and applications

##### **TEXT BOOKS:**

1. Lindberg, R.A.Process and Materials of Manufacture, PHI.
2. Nagpal, Power Plant Engineering, Khanna Publishers, Delhi.

##### **REFERENCES:**

1. E1.Wakil, M.M.Power Plant Technology, Mc Graw Hill Book Co.

4. Chapman, A.J.Production Technolgoy.

## UCC 0016 ENGINEERING MECHANICS

### Unit – I

#### **Fundamental of Mechanics – Basic Concepts Force System and Equilibrium**

Definition of Force, Moment and Couple, Principle of Transmissibility, Varignon's theorem, Resultant of force system – Concurrent and non concurrent coplanar forces, definition of rigid body and degrees of freedom, Condition of static equilibrium for coplanar force system, stability of equilibrium, concept of free body diagrams, applications in solving the problems on static equilibrium of bodies.

### Unit – II

#### **Plane Trusses**

Degrees of freedom, Types of supports and reactions, Types of loads, Analysis of Trusses-method of joints, method of sections

#### **Friction**

Introduction, Static dry friction, simple contact friction problems, ladders, wedges, screws and belt friction, introduction to virtual work principle

### Unit – III

#### **Properties of Surfaces**

Properties of sections – area, centroids of lines, areas and volumes, moment of inertia-first moment of inertia, second moment of inertia and product moment of inertia, polar moment of inertia, radius of gyration, mass moment of inertia.

### Unit – IV

#### **Kinematics and Kinetics of Particles**

Rectilinear motion, curvilinear motion, Relative motion, equations of motion, D'Alembert's principle, work, power, energy and efficiency – Conservative forces and principle of conservation of energy, Impulse – momentum, Impact – Direct central impact and oblique central impact.

### Unit - V

#### **Kinematics and Kinetics of Rigid bodies**

Plane motion, Absolute motion, Relative motion, Translating axes and rotating axes, work and energy, impulse and momentum

#### Text Books

1. Rajesekaran.,S and Sankara Subramanian., G., Engineering Mechanics, Vikas Publishing House Private Ltd., 2002
2. Natesan, S C., Engineering Mechanics, Umesh Publications, New Delhi, 2002

#### Reference Books

1. Meriam, J.L., "Statics", John Wiley, 2002
2. Meriam, J.L., "Dynamics", John Wiley, 2002
3. Natarajan, K V., Engineering Mechanics, Dhanalakshmi Publishers, Chennai, 2003.

**PHYSICS LABORATORY: UCC 0217**

(ANY 10 EXPERIMENTS)

- 1 THERMAL CONDUCTIVITY – LEE'S DISC
- 2 THERMAL CONDUCTIVITY RADIAL FLOW
- 3 SPECTROMETER – PRISM AND HOLLOW PRISM
- 4 SPECTROMETER – GRATING
- 5 SPECTROMETER - ORDINARY & EXTRAORDINARY RAYS
- 6 NEWTON'S RINGS
- 7 AIR – WEDGE
- 8 POLARIMETER
- 9 I – H CURVE
- 10 FIELD ALONG THE AXIS OF COIL CARRYING CURRENT
- 11 MELDE'S STRING
- 12 KUNDT'S TUBE
- 13 LASER EXPERIMENT: Wavelength Determination Using Grating and Vernier Calipers.
- 14 JOLLY'S EXPERIMENT FOR  $\alpha$
- 15 VIBRATION MAGNETOMETER – CALCULATION OF MAGNETIC MOMENT AND POLE STRENGTH

**UCC 0029 WORKSHOP PRACTICE**

Sl.No.	Trade	List of Exercises
1.	Fitting	Study of tools and Machineries. Exercises on symmetric joints and joints with acute angle.
2.	Welding	Study of arc and gas welding equipment and tools – Edge preparation – Exercises on lap joint and V Butt joints – Demonstration of gas welding
3	Sheet metal work	Study of tools and Machineries – exercises on simple products like Office tray and waste collection tray.
4.	Carpentry	Study of tools and Machineries – Exercises on Lap joints and Mortise joints

**LIST OF EXERCISES**

I.Fitting

- 1.Study of tools and Machineries
- 2.Symmetric fitting
- 3.Acute angle fitting

II.Welding

- 1.Study of arc and gas welding equipment and tools
- 2.Simple lap welding (Arc)
- 3.Single V butt welding (Arc)

III.Sheet metal work

- 1.Study of tools and machineries
- 2.Funnel
- 3.Waste collection tray

IV.Carpentry

- 1.Study of tools and machineries
- 2.Half lap joint
- 3.Corner mortise joint.

**UCC 0228 CHEMISTRY PRACTICALS**

(Any 10 Experiments)

1. Determination of total hardness of water by EDTA method.
2. Determination of alkali by Flame photometer.
3. Estimation of iron by colorimetry.
4. Molecular weight determination of a polymer by viscometry.
5. Percentage composition of sugar solution by viscometry.
6. Determination of dissolved oxygen content in water.
7. Estimation of mixture of alkali ( $\text{HCO}_3 + \text{CO}_3$ )
8. Determination of Pb in polluted water by conductometry.
9. Estimation of  $\text{Fe}^{2+}$  by Potentiometry.
10. Determination of COD of a waste water sample.
11. Determination of chloride content in water.
12. Determination of copper in brass.
13. Determination of available chlorine in bleaching powder.

**UCC 3201 : MATHEMATICS - III**

**UNIT I**

**LAPLACE TRANSFORM:** Definitions - Laplace transform of unit impulse and step functions - Laplace transform of periodic functions - Exponential shift formula- Initial and final value theorems - Laplace transform of derivatives and integrals - Convolution theorem - Inverse Laplace transform - Methods of determining inverse Laplace transform -Solution of linear differential equations using Laplace transforms. (12 Hours)

**UNIT II**

**FUNCTION OF A COMPLEX VARIABLE:** Functions of a complex variable - continuity, derivative and analytic function - Cauchy - Riemann equations – Necessary and sufficient conditions for analyticity - Harmonic and orthogonal properties of real and imaginary parts - Conformal mapping - Bilinear transformations. (12 Hours)

**UNIT III**

**COMPLEX INTEGRATION:** Cauchy's theorem -Cauchy's integral formula - Taylor's and Laurent series - Residue theorem - Contour integration round the unit circle and semi-circular contour. (12 Hours)

**UNIT IV**

**FOURIER SERIES:** Dirichlet's conditions - Expansion of periodic functions into Fourier series- Change of interval- Half-range Fourier series. (10 Hours)

**UNIT V**

Complex form of Fourier series - Root mean square value - Parseval's theorem on Fourier coefficients - Harmonic analysis. **FOURIER TRANSFORM:** Definition and properties - Fourier Integral theorem - statement - Fourier sine transform and cosine transforms - Inverse Fourier transform. (12 Hours)

**TEXT BOOKS**

1. M.K.Venkataraman, '*Engineering Mathematics*', Third Year Part A &B, The National Publishing Company, Madras (1995).
2. S. Naryanan, T.K. Manicavachagam Pillai, and C. Ramanaiah, '*Advanced Mathematics for Engineering students*', C. Viswanathan & Co Pvt. Ltd., Madras (1985).

**REFERENCE BOOKS:**

1. Erwin Kreyszig, '*Advanced Engineering Mathematics*', Wiley Eastern Ltd. (1985).
2. B.S.Grewal, '*Higher Engineering Mathematics*', Khanna Publishers, Delhi (1985).

**UCS 3032 / UIT 3032 : ELECTRONIC DEVICES AND CIRCUITS**

**UNIT I**

**DIODES AS AN ELECTRONIC CIRCUIT ELEMENT:** Diode as a Circuit element, Equivalent circuits, Elementary diode circuits, Half-wave rectifiers, Ripple factors, Efficiency of rectification, clippers, capacitor input filters, Zener diode, Zener regulator, series and shunt regulators.

**UNIT II**

**SMALL SINGLE AMPLIFIERS:** Small single equivalent circuit for BJT, BJT amplifiers, Voltage gain, Current gain, input impedance for CE, CB & CC amplifiers, Class A, Class B & Class C, Power amplifiers, FET amplifiers, Voltage gains, current gain, input-output impedance of common drain configuration, multistage amplifiers, Darlington pair.

**UNIT III**

**OPERATIONAL AMPLIFIERS:** Op-amp parameters, Op-amp circuits: Design of inverting, Non-inverting amplifier, Frequency response, Voltage Follower, summer, integrator, Differentiator, Difference amplifier, Instrumentation amplifier, Comparators, Voltage to frequency converters, Analog multipliers and demultiplexers.

**UNIT IV**

**FEEDBACK AMPLIFIERS AND OSCILLATORS:** Feedback amplifiers, Four types of feedback, Effect of feedback of a amplifier, performance and Distortion oscillators, Condition for oscillators, Analysis and design of various oscillators employing BJT, FET and Op-Amp, LC-oscillators, frequency stability.

**UNIT V**

**VOLTAGE REGULATORS:** Regulator using op-amp IC regulators, production switching for voltage regulators, feedback current building, Negative voltage regulators using IC current boosting of IC regulators, Switching regulators.

**TEXT BOOKS**

1. Jacob Milman and Arvin Grabel, "*Microelectronics*", McGraw Hill EDIT, Fifth EDIT, 1998.
2. R. Boybested and Louis Nishalsky, "*Electronic Devices and circuit Theory*". Prentice Hall.

**UIT 3083 : INTRODUCTION TO INFORMATION TECHNOLOGY**

**UNIT I**

**INTRODUCTION:**Information Age; Responses – Information system; Infrastructure and Architecture – IT support for organizations; Types of information systems – Managing IT – Basic of computer hardware and software for IT infrastructure- input devices, output devices, memory devices.

**UNIT II**

**IT FOR TELECOM NETWORKS:**Telecommunication system: Networks: Software; Network processing strategy; Telecom applications; Internet and Intranet; Operation and services provided; WWW; Intranets, ftp, Usenet, Remote login.

**UNIT III**

**IT APPLICATIONS:**Information system; GIS EDI and EFT; Extranets; Implementation; Data, Knowledge and decision support; Decision making- and support systems; Data visualization technologies; Knowledge Management- and Discovery and analysis.

**UNIT IV**

**INTELLIGENT SYSTEMS AND E-COMMERCE:**AI and IS: Expert systems; Intelligent agents; Virtual reality; Ethical and global issues; E-commerce: Business applications: Market research and customer support Infrastructure, payments and other support.

**UNIT V**

**INFORMATION TECHNOLOGY AND SYSTEMS:**Planning and Management: Principles for IS planning: Role of IS and user departments; Resources; IT architecture; Centralized and no centralized; Client/server; End user computing architecture; Managing IS; Organizational structure; IS vulnerability; protection; Security; Network Protection and Firewalls Risk management and cost-Benefit analysis.

**TEXT BOOKS**

1. *Introduction to IT*, E. Turban et al., John Wiley and sons, IC, 2000.
2. *IT for management: Making connection for strategic Advantage*, 2<sup>nd</sup> Edition, E. Turban et al., John Wiley and sons, Inc., 2001.
3. *IT, the breaking wave*, Dennis, P., Curtin et al., Tata McGraw-Hill, 1999.
4. *IS, A management perspective*, Steven Alter, 1999.

**UCS 3044 / UIT 3084 : DIGITAL COMPUTER FUNDAMENTALS  
AND ARCHITECTURE**

**UNIT I**

**Digital Logic Fundamentals:** revision of RTL, DTL, I<sup>2</sup>L, TTL, ECL, MOS, CMOS logic families – revision of binary number systems, boolean algebra and logic gates – simplification of boolean functions.

**UNIT II**

**Combinational Circuits:** adders – subtractors – code converters – binary parallel adder – decimal adder – magnitude comparator – encoders – decoders – multiplexers – demultiplexers – ROM - PLA.

**Sequential Circuits:** flip-flops – triggering – clocked sequential circuits – excitation tables – flip-flop conversion – design procedure – registers – shift registers – synchronous and asynchronous counters.

**UNIT III**

**Processor Organization:** general register organization – stack organization – instruction formats – addressing modes – data transfer and manipulation – program control.

**Pipeline and Vector Processing:** parallel processing – pipelining – arithmetic pipeline – instruction pipeline – RISC pipeline – vector processing – array processors.

**UNIT IV**

**Memory Organization:** memory hierarchy – main memory – auxiliary memory – associate memory – cache memory – virtual memory.

**UNIT V**

**Input-Output Organization:** input-output interface – asynchronous data transfer – modes of transfer – priority interrupt – DMA – IOP – serial communication.

**TEXT BOOKS**

1. M. Morris Mano, “*Digital Logic and Computer Design*”, Prentice-Hall of India Pvt. Ltd., 2002.
2. M. Morris Mano, “*Computer System Architecture*”, 2<sup>nd</sup> edition, Prentice-Hall of India Pvt. Ltd., 1999.

**REFERENCE BOOKS:**

1. Carl Hamacher, Zvonko G. Vranesic, Safwat G. Zaky, “*Computer Organization*”, 4<sup>th</sup> edition, McGraw-Hill, 1996.

**UCS 3045 / UIT 3085 : DATA STRUCTURES**

**UNIT I**

Introduction, algorithmic notation, Space and Time analysis of an algorithm, information and its storage representation, Representation and its manipulation of strings, Pattern Matching. Searching and sorting techniques.

**UNIT II**

Linear data structures, array of structures, stacks, application of stacks, queues, priority queues, pointers and linked allocation, Singly Linked List, linked stacks, Linked queues, Polynomial Addition, Sparse matrices, Equivalence relations, Doubly Linked List, Circular Linked List, Dummy headed Linked List – Garbage Collection and Compaction

**UNIT III**

Non-linear data structures, Trees – Binary tree, Terminology, Representation, Traversal, Applications. Graph – Terminology, Representation, traversals, spanning trees, shortest path and Transitive closure, Topological sort.

**UNIT IV**

Symbol tables – Static, Dynamic and Hash tables

**UNIT V**

File structures, external storage devices, sequential files, indexed sequential files, direct files, external searching, linear and virtual hashing, virtual memory, VSAM Files, multiple key access.

**TEXT BOOKS**

1. Ellis Horowitz and Sartaj Sahni “*Fundamentals of Data Structures*” Galgotia Booksource, 1995.
2. Robert Kruse ‘C.L. Tondo and Bruce Leung, “*Data Structures and Program Design in C*”, 2<sup>nd</sup> edition, Pearson Education Asia, 2001.

**REFERENCE BOOKS**

2. D. Samanta, “*Classic Data structures*”, Prentice-Hall of India private ltd., 2001.

**UIT 3086 : BUSINESS PROCESS**

**UNIT I**

Nature and Types of Business Organizations – Introduction to Business Process - Organization Structure – Definition – Complexity – Formalization – Outcomes for individuals – Size – Technology – Internal culture – Environment – National cultures – IT Industry Scenario.

**UNIT II**

Recognizing a Creation Company - The WHOOSH – Beginners mind - Creation Company Vs. Compliance Company.

**UNIT III**

Becoming a Creation Company – Choosing to change – the art of collaboration – Models. Leading a Creation Company – Freedom and Focus – Creation Leadership.

**UNIT IV**

Introduction to Business Process Reengineering – Business Process Reengineering through IT – People view – Case Study – Empowering through IT.

**UNIT V**

Introduction to e-Business – Rules of e-Business – e-business execution framework - Trend spotting – Construction steps of e-business design – Case studies – Constructing the e-business architecture.

**TEXT BOOKS:**

1. Richard H. Hall, *Organizations, Structures, Processes, and Outcomes*, Pearson Education, 2001.
2. M. S. Jayaraman et. al., *Business Process Reengineering*, Tata McGraw Hill publications, 2001.
3. Tom McGehee, *Whoosh: Business in the Fast Lane*, Perseus Publication, 2002.
4. R. Kalakota and M. Robinson, *e-Business : Roadmap for Success*, Pearson Education, 2000.

**UIT 3037 : ELECTRONIC CIRCUITS LABORATORY**

1. VI characteristics of Semiconductor and Zener diodes
2. Diode clipping and clamping circuits
3. Bridge rectifier – Efficiency, Ripple factor with and without Capacitance input filter
4. Static characteristics of common emitter transistor configuration and determination of h parameters.
5. Static characteristics of common base transistor configuration and determination of h parameters.
6. Drain characteristics of FET and determination of Drain resistance, Mutual conductance and Amplification factor.
7. V.I. Characteristics of silicon controlled rectifier and Uni-Junction transistor.
8. R.C. Coupled amplifier: Determination of  $Z_{in}$ ,  $Z_{out}$  and frequency response.
9. LC oscillator
10. Class B push – pull power amplifier and to find the efficiency as a function of load.
11. Applications of opamp (adder, subtractor, integrator and differentiator)
12. Wien's bridge and R.C Phase shift Oscillator using opamp.

--\*\*--

**UCS 3048 / UIT 3088 : DIGITAL LAB**

1. Implementation of logic circuits using gates
  - . Full adder/full subtractor
  - . Implementation of logic functions using universal gates only
  - . Design of priority encoder
  - . Design of demux using nor gates only
  - . Code convertor
2. Implementation of circuits using MSI
  - . Synchronous counters
  - . Asynchronous counters
  - . Binary multiplier
  - . Decimal Adder
  - . Universal shift register
  - . Design of Arithmetic unit
3. Interface experiments with MSI
  - . design of ALU
  - . Interface of ALU with memory
4. Interface of ALU with registers

--\*\*--

**UCS 3049 / UIT 3089 : DATA STRUCTURE LAB**

Implementation of stacks, queues, sorting and searching techniques, singly linked list, doubly linked list, circular linked list, circular queue, de-queue, priority queue, polynomial addition, building a binary tree, binary search tree, expression evaluation using binary tree, implementing graph, finding shortest path.

***UCC 30810 : GENERAL PROFICIENCY - I***

**UNIT 1**

**BASICS OF COMMUNICATION** : Essential Communication Skills; Elements of Communication; Basic Models of Communication; Frames of Reference; Purposive Communication; Channels of Communication; Developing Good Communication Style.

**UNIT II**

**LANGUAGE DEVELOPMENT THROUGH READING** : TOEFL based Reading Comprehension; Current Affairs; Vocabulary Building; Idioms and Phrases; Basic Phonetics.

**UNIT III**

**SPEAKING PRACTICE** : Dialogue/Conversation; Types of Conversations; Listening Skills; Telephone Etiquette; Public Speaking; Debate.

**UNIT IV**

**QUANTITATIVE ANALYSIS** : Aptitude Tests

**REFERENCE BOOKS :**

1. Bovee, Courtland L and John V Thill. *Business Communication Today*. Pearson Education, 2003.

**UCS 4201 / UIT 4201 : DISCRETE MATHEMATICS AND GRAPH THEORY**

**UNIT I**

Connectives, Statement formulae, Equivalence of Statement formulae, Functionally complete set of connectives-NAND and NOR connectives, implication, Principal conjunctive and disjunctive normal forms

**UNIT II**

Inference calculus-Derivation process-Conditional proof-Indirect method of proof-Automatic theorem proving-Predicate calculus

**UNIT III**

Partial ordering-Lattices-Properties-Lattices as algebraic system-sub lattices-Direct product and homomorphism-Special lattices-Complemented and Distributive lattices

**UNIT IV**

Graphs-Applications of graphs-degree-pendant and isolated vertices-isomorphism-sub graphs-walks-paths and circuits- connected graphs –Euler graphs-operations on graphs-More on Euler graphs –Hamilton paths and circuits-complete graph

**UNIT V**

Trees-properties of Trees-Pendant vertices in a Tree-Distance and Center in a Tree-rooted and binary trees-spanning trees-Fundamental Circuits-Distance between spanning trees-shortest spanning trees-Kruskal algorithm

**UIT 4032 : PRINCIPLES OF COMMUNICATION**

**UNIT I**

**Introduction :** Communication principles – block diagram of modem communication system – study of electromagnetic spectrum- use of different spectra for different applications

**UNIT II**

**Modulation methods :** Need for modulation – amplitude and modulations (FM and PM) – mathematical equations – spectra – side bands – bandwidth – power relations – modulation index- phase diagram – comparison of AM, FM, PM. Sampling theorem – analog pulse modulations- PAM and PTM (PPM , PDM or PWM) – digital pulse or coded modulations – PCM, properties like spectra , waveform, BW and SNR. CW modulation for digital signals – ASK, FSK,PSK – multiplexing systems for pulsed and CW modulations – TDM and FDM – comparison of textures and merits

**UNIT III**

**Modulators :** Generation of AM waves – linear modulations , collector, base emitter modulation . square law modulations – diode and balanced modulators – suppression of carrier. Generation of FM waves – Reachance modulator method – Armstrong method – conversion of FM to PM and PM to FM waves. Generation of PAM,PPM, and PWM waves- conversion of PWM wave to PPM wave

**UNIT IV**

Demodulation methods / Detectors : **Demodulation of AM waves – Linear detectors – synchronous and envelope detectors – performance comparison – Demodulation of FM waves – slope detector – balanced slope detector – Foster – Seely discriminator – ratio detector – demodulation of PAM , PPM,PWM ,PCM & PDM – errors**

**UNIT V**

Communication systems : **Transmitters and receivers – class RF amplifier – class B push pull linear amplifier – lowlevel and high level modulation systems – their comparison – AM transmitter – FM transmitter – Direct and asynchronous transmitter – straight receiver – superheterodyne AM receiver – communication receiver – diversity reception – FM receivers**

**TEXT BOOKS**

**UCS 4042 / UIT 4083 : MICROPROCESSORS AND APPLICATIONS**

**UNIT I**

**INTRODUCTION TO MICROPROCESSORS :** Concept and need for microprocessors – evolution - general architecture - control unit – internal registers – arithmetic and logic unit – state transition – architecture of 8085 and 8086 – timing and sequencing.

**UNIT II**

**INSTRUCTION SET AND PROGRAMMING :** Addressing modes – instruction set summary of 8085 – overview of 8086 instruction set – assembly language programming: arithmetic and logic – code conversion – counters and delay routines - stacks and subroutines.

**UNIT III**

**INTERRUPTS AND DMA :** Data transfer techniques – interrupt structure of 8085 – overview of 8086 interrupts – interrupt vectors – interrupt service subroutines – priority – multiple interrupts – applications – real time clock - concept of DMA data transfer

**UNIT IV**

**MEMORY & I/O INTERFACING :** Types of memory – memory mapping – address decoders – dynamic RAM interfacing – concept of I/O map – types – I/O decode logic – interfacing key switches and LEDs – programmable peripheral interface 8255 – programmable interval timer 8253 – programmable interrupt controller 8259 – programmable DMA controller 8237

**UNIT V**

**SERIAL COMMUNICATION AND MICROPROCESSOR APPLICATIONS :** Concept of Serial Communication – 8251 USART – RS232C interface – traffic light control – data acquisition system – temperature monitoring system – architectural features of Pentium and 8051 microcontroller.

**TEXT BOOKS:**

1. Ramesh S.Gaonkar, “*Microprocessor Architecture, Programming and Applications with 8085*”, Penram Publications, 2002
2. A.K.Ray and Bhurchandi , “*Advanced Microprocessors And Peripherals*”, Tata McGraw Hill, 2000

**REFERENCE BOOKS**

2. Ajit Pal, “*Microprocessors Principles & Applications*” , Tata Mcgraw Hill, 2001

UCS 4044 / UIT 4084 : DESIGN AND ANALYSIS OF ALGORITHMS

UNIT I

**Analysis of algorithms** : Introduction - analyzing control structures - average case analysis solving recurrences. **Analysis** : Sorting – heap, radix, insertion, selection and bubble. Searching – binary, sequential and fibonacci.

UNIT II

**Divide and Conquer method** : General method – binary search – finding maximum and minimum – merge sort and quick sort – strassen’s matrix multiplication. **Greedy method** : General method – Knapsack problem – minimum spanning tree algorithms – single source shortest path algorithm – scheduling, optimal storage on tapes, optimal merge patterns.

UNIT III

**Dynamic programming** : general method – multi stage graphs – all pairs shortest path algorithm – 0/1 Knapsack and traveling salesman problem – chained matrix multiplication – approaches using recursion – memory functions. **Basic search and traversal technique** : the technique – and/or graphs – biconnected components – depth first search – topological sorting – breadth first search.

UNIT IV

**Backtracking** : The general method – 8 queens problem – sum of subsets – graph coloring – Hamiltonian cycle – Knapsack problem.

UNIT V

**Branch and bound method** : 0/1 Knapsack problem – travelling salesman problem.

TEXTBOOKS

1. Gilles Brassard & Paul Bratley, “*Fundamentals of algorithms*”, PHI, 1997.
2. E. Horowitz & Sahni, “*Fundamentals of Computer Algorithms*”, Galgotia Publications. 1997.

2. Sara Baase, “*Computer Algorithms, Introduction to Design and Analysis*”, Addison-Wesly Publishing Company – 1991.

**UCS 4043 / UIT 4085 : OPERATING SYSTEMS**

**UNIT I**

Introduction: Mainframe Systems -- Desktop Systems – Multiprocessor Systems – Distributed Systems – Clustered Systems - Real Time Systems — Hardware Protection – System Components – Handheld Systems -Operating System Services – System Calls – System Programs – System Structure – Visual Machines - System Design and Implementation.

**UNIT II**

**Process Management: Process Concept – Process Scheduling – Operation on Process – Cooperating Processes – Interprocess Communication – Threads – Overview – Multithreading Models - Process Synchronization – The Critical Section Problem – Synchronization Hardware – Semaphores – Classical Problems of Synchronization – Deadlocks – System Model – Deadlock Characterization – Methods for handling Deadlocks – Deadlock Prevention – Deadlock Avoidance – Deadlock Detection –Recovery from Deadlock.**

**UNIT III**

CPU Scheduling and Memory Management: CPU Scheduling - Basic Concepts – Scheduling Criteria – Scheduling Algorithms – Multiple- Processor Scheduling – Real-Time Scheduling – Algorithm Evaluation - Memory Management -Background – Swapping –Contiguous Memory Allocation –Paging – Segmentation – Segmentation with paging.

**UNIT IV**

Virtual Memory: Virtual Memory – Demand paging – Page Replacement – Thrashing – Allocation of Frames - Other Considerations - File Systems – File Concepts -Access Methods – Directory Structure – File System Mounting – File Sharing – Protection - File System Structure – File System Implementation – Recovery.

**UNIT V**

Files and Secondary Storage Management: Allocation Methods - Free-Space Management – Directory Implementation – Recovery - Disk Structure – Disk Scheduling – Disk Management – Swap Space management – Case Study: Linux System – Components of a Linux Systems – Process Management – Process Scheduling – Security.

**UIT 4086 : FORMAL LANGUAGES AND COMPILERS**

**UNIT I**

***Finite automata and Regular Expressions:*** Deterministic and Non-Deterministic Finite Automata, Finite Automata with e-moves, regular expressions - equivalence of NFA and DFA, two-way finite automata, Moore and Mealy machines, applications of finite automata

**UNIT II**

***Regular sets and Context Free Grammars:*** Properties of regular sets, context Free Grammars - derivation trees, Chomsky Normal Form and Greibach Normal Form, ambiguous and unambiguous grammars, minimization of finite automata

**UNIT III**

***Basic Parsing Techniques:*** Shift reduce parsing, operator precedence parsing, Recursive descend parsing, predictive parsing, LR parsing, Simple LR parsing, canonical LR parsing, LALR parsing

**UNIT IV**

***Syntax Directed Translation Schemes:*** Implementation of Syntax Directed Translator, Intermediate code, Representations of intermediate code, Translation of Assignment Statements, Boolean Expressions, Flow Control Statements, Array References in arithmetic expressions, Declaration Statements

**UNIT V**

***Pushdown Automata and Parsing Algorithms:*** Pushdown Automata and context-free languages, Top-down parsing Bottom-up parsing, properties of CFL, Applications of pumping lemma, closure properties of CFL and decision algorithms

**TEXT BOOKS**

1. John E.Hopcroft and Jeffrey D.Ullman, "*Introduction to Automata Theory, Languages and Computation*", Narosa Publishers, 2002

3. Alfred Aho, Ravi Sethi, V.Jeffrey Ullman D. "*Compilers Principles, Techniques And Tools*", Addison\_Wesley, 1988

### **UIT4037 : COMMUNICATION LAB**

1. AM using IC version – demodulation
2. Pre – emphasis and de emphasis
3. Narrow band and wide band FM
4. PCM encoder and decoder
5. Study of ASK,FSK and PSK
6. TDM and demultiplexing
7. Study of digital transmission using digital transmission analyzer
8. Delta modulation and adaptive delta modulation
9. Study of modern modulation techniques like GMSK

### **UCS 4047 / UIT 4088 : MICROPROCESSOR LABORATORY**

#### **LIST OF EXPERIMENTS**

1. Study of 8085 Microprocessor trainer kit
2. Assembly language programming: arithmetic
3. Assembly language programming: block operations
4. Assembly language programming: code conversion
5. Assembly language programming: sorting and searching
6. Digital clock simulation
7. Printer interfacing
8. Serial communication
9. Elevator simulation
10. Traffic light control
11. Music synthesizer
12. ADC & DAC interfacing
13. Stepper motor and DC motor interfacing
14. 8086 assembly language programming using MASM
15. Assembly language programming using 8051

### **UCS 4048 / UIT 4089 : OPERATING SYSTEMS LAB**

#### **LIST OF EXPERIMENTS**

1. Basic UNIX commands
2. Shell Programming
3. Implementation of scheduling algorithms.
4. Simulation of Paging, Segmentation.
5. File systems.
6. Process management – Fork-Exec.
7. Message queues, Pipe, FIFO's
8. Signals.
9. Shared memory and Semaphores

**UCC 40810 : GENERAL PROFICIENCY - II**

**UNIT I**

**IMPORTANCE OF COMMUNICATION** : Introduction; Verbal and Non-verbal Codes of Communication; Barriers to Communication; Self-Assessment; SWOT Analysis; Identifying Strengths and Weaknesses.

**UNIT II**

**PERSONALITY DEVELOPMENT** : Body Language; Non-verbal Skills; Leadership Qualities; Emotional Quotient; Effective Time Management; Surviving Stress; Overcoming Failure; Professional Ethics

**UNIT III**

**VERBAL COMMUNICATION** : Social Exchanges; Planned Speech; Extempore; Basics of Attending & Organizing Meetings; Informal Discussions

**UNIT IV**

**QUANTITATIVE ANALYSIS** : Aptitude Tests

**REFERENCE BOOKS**

1. Mohan, Krishna and Meera Banerji. *Developing Communication Skills*. Macmillan, 2002.

**UIT 5201 : MATHEMATICAL STATISTICS AND NUMERICAL METHODS**

**UNIT I**

**SOLUTION OF ALGEBRAIC EQUATIONS AND SOLUTION OF LINEAR SIMULTANEOUS EQUATIONS:** The method of Bisection, the method of false position, Newton-Raphson method, Gauss elimination method, Crout's reduction, Gauss - Seidel Iterative method - Power method for finding the numerically largest eigen value.

**UNIT II**

**INTERPOLATION, DIFFERENTIATION AND INTEGRATION:** Interpolation by Newton's forward and backward difference formulae for equal intervals, Lagrange's interpolation formula for unequal intervals, Differentiation based on finite differences to find first and second order derivatives, Integration by Trapezoidal and Simpson's 1/3 rule.

**UNIT III**

**RELIABILITY** Concept of Reliability, Reliability and Availability of systems, Maintainability, Preventive maintenance

**UNIT IV**

**QUALITY CONTROL** Introduction, Process control, Control charts for variables and attributes ( $\bar{X}$ , R, p, np, c charts), Operating characteristic curves.

**UNIT V**

**QUEUEING THEORY** The Birth-Death process (M/M/1/ $\infty$ , M/M/c/ $\infty$ , M/M/1/N, M/M/c/N (N>c), M/M/s/s, M/M/ $\infty$  models only), Pollaczek-Khinchine formula.

3. S.P.Gupta, *Statistical Methods*, Sultan Chand & Sons, New Delhi (for Unit IV)
4. D.Gross, and C.M.Harris, *Fundamentals of Queueing Theory*, 2<sup>nd</sup> edition, Wiley, New York, (1985). (for Unit V)

**UIT 5032: COMMUNICATION ENGINEERING**

**UNIT I**

INTRODUCTION : Definition of communication system – classification of communication systems – need – principles and applications.

**UNIT II**

CELLULAR MOBILE COMMUNICATION : Basic cellular system – performance criteria- uniqueness of mobile radio environment – operation of cellular system - elements of cellular mobile radio – Hand off – frequency management and channel assignment.

**UNIT III**

RADAR SYSTEM : Radar Block diagram and operation – radar frequencies – radar range equation. Prediction of range performance – minimum detectable signal – radar cross section of targets, cross section fluctuations – transmitter power, pulse repetition frequency and range ambiguities – system losses and propagation effects.

**UNIT IV**

SATELLITE COMMUNICATION SYSTEM : Elements of orbital mechanics – communication satellite design – link design and satellite based personal communication CEO, ICO, GEO systems. VSAT ultroules and terminals, INTELSAT, IMMARSAT and INSAT.

**UNIT V**

FIBER OPTICAL COMMUNICATION SYSTEM : Advantages of optical fiber communication – need – principle of light transmission through a fiber – fiber medium – light sources – photo detectors – Application and future developments. Power budget analysis and livle design.

**REFERENCE BOOKS:**

1. William C.Y. Lee, '*Mobile Cellular Telecommunication Systems*', McGraw Hill International Edition, 1990.

**UCS 5043 / UIT 5083 : VISUAL PROGRAMMING**

**UNIT I**

**Introduction to Windows Programming:** Different paradigms of programming – Comparison – Event driven programming – Windows programming fundamentals – Data types – Resources – Windows messages – Device contexts – Document interface – Dynamic linking libraries.

**UNIT II**

**Visual Basic Programming:** Creating and using Controls – Menus and Dialogs – Managing projects – Programming fundamentals – Objects and instances – Programming user events – Using custom controls and grid control – inbuilt and user defined functions - Debugging - Creating graphics for application – Displaying and printing information – File system controls - Accessing databases with the data controls – VB and the Internet.

**UNIT III**

**Visual C++ Programming:** Visual C++ components – Developing simple applications – Microsoft Foundation classes – Controls – Message handling - Document-view architecture – Dialog based applications – Mouse and keyboard events – Reading and writing documents – SDI and MDI environments.

**UNIT IV**

**Advanced Features in VB and VC++:** Creating user defined DLL's – Dynamic data transfer functions – User interface classes – Database management with ODBC – Object Linking and Embedding – Communicating with other applications.

**UNIT V**

**Visual J++:** Introduction to VJ++ - Applet Wizard – Handling events – Multithreading – Animation Techniques – Animating images – Applets and networking.

**TEXT BOOKS**

### UIT 5084 : OBJECT ORIENTED PROGRAMMING

#### UNIT I

Limitations in structured programming-Characteristics of Object Oriented Language – data types – loops – pointers – arrays – structures – functions – Classes – Objects.

#### UNIT II

Operator overloading – Inheritance – Polymorphism – Templates – Exception Handling – class Hierarchies – library organization and containers – Strings – Stream – Design and programming.

#### UNIT III

Java vs. C++ - Java on the Internet – Exception handling – Multithreading and persistence – Java keywords and flow control – Garbage collection – packages – composition vs. inheritance.

#### UNIT IV

Final declaration – Interfaces and inner classes – Java I/O classes – Run time type identification – User Interface design basics with swing – JAR files.

#### UNIT V

Network programming with sockets – Applets – Abstract window tool kit – JDBC database programming – Introduction to Servlets –RMI

*Note:* Unit I & II deals with C++ and Java  
Unit III, IV & V deals with Java.

#### TEXT BOOKS :

1. Bjarne Stroustrup, “*The C++ Programming Language*”, (3<sup>rd</sup> and Special Edition) Addison Wesley, 2000
2. Bruce Eckel, “*Thinking in Java*”, (3<sup>rd</sup> Edition) Prentice Hall PTR, 2002

#### REFERENCE BOOKS:

1. Robert Lafore, “*Object Oriented Programming in Turbo C++*”, Galgotia publications, 1998
2. E. Balaguruswamy, “*Programming with Java*” (2<sup>nd</sup> Edition), Tata McGraw Hill Publications Limited, 1999.

**UIT 5036 : COMMUNICATION ENGINEERING LAB**

1. Simulation of different communication systems and evaluating their performance
  - . cellular mobile communications
  - . different radar systems
  - . satellite link budget analysis
  - . fibre optical communication systems
2. Handoff and frequency reuse analysis
3. Experiments based on radar concepts
4. Simulation of LEO, GEO satellite systems
5. Power budget analysis and link design

**UCS 5047 / UIT 5087 : VISUAL PROGRAMMING LAB**

LIST OF EXPERIMENTS

1. **VISUAL BASIC**
  - i. Simple programs with control structures
  - ii. Adding menus to forms
  - iii. Creating dialog boxes with various options
  - iv. MDI applications
  - v. Writing code for various keyboard and mouse events
  - vi. OLE container control
  - vii. Simple programs with classes and objects
  - viii. Data access through Data control, DAO and ADO.
2. **VISUAL C++**
  - i. Creating applications with App wizard
  - ii. Drawing in documents
  - iii. Working with MFC
  - iv. Creating simple SDI and MDI applications
  - v. Exception handling
  - vi. Loading - Editing and - Adding resources - Linking resources To applications
  - vii. Drawing bitmaps
  - viii. Threads
  - ix. OLE
  - x. Active X
  - xi. DLL's

### 1. VISUAL J++

- i. Applet programs – Animating images, Multithreading  
**UIT 5088 : OBJECT ORIENTED PROGRAMMING LAB**

#### Programs in C++

Programs using classes & objects, constructors & destructors, operator overloading, inheritance, polymorphism & virtual functions, I/O streams, templates and exception handling.

#### Programs in JAVA

Programs using

1. Applets
2. Layouts: Flow Layout, Border Layout, Grid Layout, Grid Bag Layout, Card Layout
3. AWT controls: Scrollbar, Choice, List, Checkbox
4. Swings
5. Data gram sockets and Data gram pockets: Chat application
6. JDBC
7. RMI
8. Servlets & HTML

### UCC 5089 : GENERAL PROFICIENCY - III

#### UNIT I

**COMPOSITION ANALYSIS** : Technical and Non-technical Passages (GRE Based); Differences in American and British English; Analyzing Contemporary Issues; Expanding Terminology

#### UNIT II

**DEXTERITY IN WRITING** : Importance of Writing; Written vs. Spoken Language; Formal and Informal Styles of Writing; Resources for Improving Writing; Grammar and Usage; Letter-writing; Application Essays; Project Proposals

#### UNIT III

**PRESENTATION SKILLS** : Collecting and Organizing Materials; Audience; Content; Rehearsing; Delivering Matter; Questions; Controlling Anxiety; Seminar Presentations (Subject Oriented/ General Topics); Language lab Practice

#### UNIT IV

**QUANTITATIVE ANALYSIS** : Aptitude Tests; Puzzles; Psychometric Tests

### **UCS 5044 / UIT 6081 : COMPUTER HARDWARE AND TROUBLESHOOTING**

#### **UNIT I**

PC HARDWARE OVERVIEW: Introduction – Basic Parts of PC – Functional block diagram – system board – Microprocessor – Interrupts – DMA – SMPS – BIOS – POST sequence - System configuration – Memory – Mass storage – I/O interface standards

#### **UNIT II**

BUS STANDARDS and NETWORKING: ISA – PCI – SCSI – IDE – USB – comparative study and characteristics – Network Interface Cards – Cables and connectors – MODEM – AT command set

#### **UNIT III**

PERIPHERAL DEVICES & DISPLAY ADAPTERS: Functional descriptions of keyboard – mouse – printers – joystick – scanners – CGA – SVGA

#### **UNIT IV**

MASS STORAGE DEVICES: Floppy disk and drive – Hard disk and drive – MFM and RLL recording standards – CD technology – DVD technology – pen drives – tape drives

#### **UNIT V**

TROUBLESHOOTING & TOOLS: In-Circuit Emulators – Logic State/Timing Analysers – Digital Multimeters – CROs – Signature Analysers – Troubleshooting problems of system boards, add on cards and peripherals.

### UCS 6042 / UIT 6082 : DATABASE MANAGEMENT SYSTEMS

#### UNIT I

Introduction to Database Systems: Overview – Data Models – Database System Architecture – History of Database Systems. Entity-Relationship Model: Basic Concepts – Constraints – Keys – Design Issues – Entity Relationship Diagram – Weak Entity Sets – Extended E-R Features – Design of an E-R Database Schema – Reduction of E-R Schema to Tables – The Unified Modeling Language UML.

#### UNIT II

Relational Model: Structure of Relational Databases – Relational Algebra – Extended Relational Algebra Operations – Modification of Database – Views – Tuple Relational Calculus – Domain Relational Calculus. SQL: Background – Basic Structure – Set Operations – Aggregate Functions – Null Values – Nested Subqueries – Views – Complex Queries – Modification of the database – Joined Relations – Data-Definition Language – Embedded SQL –Dynamic SQL – Other SQL Features. Other Relational Languages: Query-by-Example – Datalog – User Interfaces and Tools

#### UNIT III

Integrity and Security: Domain Constraints – Referential Integrity – Assertions – Triggers – Security and Authorization – Authorization in SQL – Encryption and Authentication. Relational-Database Design: First Normal Form – Pitfalls in Relational-Database Design – Functional Dependencies – Decomposition – Desirable Properties of Decomposition – Boyce-Codd Normal Form – Third Normal Form – Fourth Normal Form – More Normal Forms – Overall Database Design Process.

#### UNIT IV

Storage and File Structures: Overview of Physical Storage Media – Magnetic Disks – RAID – Tertiary Storage – Storage Access – File Organization – Organization of Records in Files – Data-Dictionary Storage. Indexing and Hashing: Basic Concepts – Ordered Indices – B<sup>+</sup>-Tree Index Files – B-Tree Index Files – Static Hashing – Dynamic Hashing – Comparison of Ordered Indexing and Hashing – Index Definition in SQL – Multiple-Key Access

### UNIT V

Transactions: Transaction concept – Transaction State – Implementation of Atomicity and Durability – Concurrent Executions – Serializability – Recoverability – Implementation of Isolation – Transaction Definition in SQL – Testing for Serializability  
Concurrency Control: Lock-Based Protocols – Timestamp-Based Protocols – Validation-Based Protocols – Multiple Granularity – Multiversion Schemens – Deadlock Handling – Insert and Delete Operations – Weak Levels of Consistency – Concurrency of Index Structures. Recovery System: Failure Classification – Storage Structure – Recovery and Atomicity – Log-Based Recovery – Shadow Paging – Recovery with Concurrent Transactions – Buffer Management – Failure with Loss of Nonvolatile Storage – Advance Recovery Techniques – Remote Backup Systems

**UCS 6043 / UIT 6083 : SOFTWARE ENGINEERING AND ARCHITECTURE**

**UNIT I**

**OVERVIEW OF SOFTWARE ENGINEERING** – Introduction – FAQs about Software Engineering – Professional and Ethical responsibility – Computer-based system engineering – Emerging system properties – System and their environment – System modeling – System engineering process – System procurement. **SOFTWARE PROCESSES** -- Process models – Process iteration – Software specification – Software design – Software validation – Software evolution - Automated process support. **PROJECT MANAGEMENT** - Management activities – Project planning – Project scheduling – Risk management.

**UNIT II**

**REQUIREMENTS** – Functional and non-functional requirements – User requirements – System requirements – Software requirements document – Requirements engineering processes – Feasibility studies – Requirements elicitation and analysis – Requirements validation Requirements management. **SYSTEMS MODELS** – Context models – Behavioral models – Data models – Object Models – CASE workbenches. **SOFTWARE PROTOTYPING** – Prototyping in the software process – Rapid prototyping techniques – User interface prototyping. **FORMAL SPECIFICATION** – Formal specification in the software process – Interface specification – Behavioral specification.

**UNIT III**

**ARCHITECTURE AND SOFTWARE DESIGN** – System structuring – Repository model – Client server model – Abstract machine model – Control models – Modular decomposition – Domain-specific software architecture – Distributed system architectures – multiprocessor architectures – client server architectures - CORBA. **OBJECT-ORIENTED DESIGN** – Objects and object classes – Object oriented design process – Design evolution. **REAL-TIME SOFTWARE DESIGN** – System design – Real-time executives – Monitoring and control systems. **DESIGN WITH REUSE** – Component-based development – Application families – Design patterns. **USER INTERFACE DESIGN** - User interface design principles – User interaction – Information presentation – User support - Interface evaluation.

**UNIT IV**

**CRITICAL SYSTEMS AND DEPENDABILITY** – Critical systems – Availability and reliability – Safety – Security. **CRITICAL SYSTEMS SPECIFICATION AND DEVELOPMENT** – Software reliability specification – Safety specification – Security specification – Fault minimization – Fault tolerance – Fault-tolerant architectures – Safe system design. **VERIFICATION AND VALIDATION** – Verification and Validation planning – Automated static analysis – Cleanroom software development. **SOFTWARE TESTING** – Defect testing – Integration testing – Object oriented testing – Testing

## Curriculum & Syllabi (Information Technology)

---

workbenches. **CRITICAL SYSTEMS VALIDATION** – Formal methods and critical systems – Reliability validation – safety assurance – Security assessment.

### UNIT V

**SOFTWARE COST ESTIMATION** – Productivity – Estimation techniques – Algorithmic cost modeling – Project duration and staffing. **QUALITY MANAGEMENT** – Quality assurance and standards – Quality planning – Quality control – Software measurement and metrics. **PROCESS IMPROVEMENT** – Process and Product Quality – Process analysis and modeling – Process measurement – The SEI Process Capability Maturity Model – Process classification.

### TEXT BOOK

1. Ian Sommerville, "*Software Engineering*", Sixth Edition, Pearson Education, 2001.

## UCS 6041 / UIT 6084 : COMPUTER NETWORKS

### UNIT I

**Introduction To Networks And Communication Media:** Uses – Network Hardware – Network Software – Reference Models – Example Networks – Network Standardization. Basis for data communication - Transmission media – Wireless Transmission – Telephone Systems – Satellite Communication.

### UNIT II

**The Data Link Layer :** Data Link Layer design issues – Error Detection and Correction Methods - Elementary Data Link Protocols – Sliding Window Protocols – Protocol Verification Methods – Channel Allocation – Multiple Access protocols – IEEE 802 Standards – Bluetooth.

### UNIT III

**The Network Layer:** Network Layer design issues – Routing algorithms – Congestion Control algorithms – Internetworking – Network Layer in Internet.

### UNIT IV

**The Transport Protocols:** Transport Service – Transport Protocols – Internet Transport Protocols UDP – TCP - Performance issues.

### UNIT V

**The Application Layer:** Application Layer design issues – Domain Name System - Electronic Mail – World Wide Web – Multimedia - Other Applications – Network Security - Basic Cryptography - DES - RSA.

### TEXT BOOK

1. Andrews S. Tanenbaum, "*Computer Networks*", Prentice Hall of India Private Limited, (4<sup>th</sup> Edition), 2003.

### REFERENCE BOOK

### UCS 5048 / UIT 6086 : HARDWARE TROUBLESHOOTING LABORATORY

#### LIST OF EXPERIMENTS

1. Study of In-Circuit Emulator
2. Study of Logic State/Timing Analyzers
3. Hot and cold test of electronic components
4. PC system integration and Hard disk partitioning
5. Circuit Tracing
6. Adding I/O ports to an existing hardware (kit or PC)
7. Troubleshooting PC Mother board problems
8. Troubleshooting Printer related problems
9. Troubleshooting keyboard related problems
10. Troubleshooting 8085 kit using Logic Analyser
11. Troubleshooting 8085 kit using In-Circuit Emulator
12. PC to PC communication using direct cable connection
13. MODEM programming
14. Troubleshooting Floppy disk drive problems
15. Study and programming of USB port

**UCS 6047 / UIT 6087: DATABASE MANAGEMENT SYSTEMS LABORATORY**

Experiments are to be carried out in DB2 / ORACLE AND VB.

1. Study of Database Concepts  
RELATIONAL MODEL – TABLE – OPERATIONS ON TABLES – INDEX – TABLESPACE – CLUSTERS – SYNONYM – VIEW – SCHEMA – DATA DICTIONARY – PRIVILEGE – ROLE – TRANSACTIONS
2. Study of SQL  
Primitive Data Types – User Defined data Types – Built-in Functions – Parts of Speech of CREATE, ALTER, DROP, SELECT, INSERT, DELETE, UPDATE, COMMIT, ROLLBACK, SAVEPOINT, GRANT, REVOKE
3. Study of Query Types  
Queries involving Union, Intersection, Difference, Cartesian Product, Divide Operations – Sub Queries – Join Queries – Nested Queries – Correlated Queries – Recursive Queries
4. Study of PL/SQL  
Blocks, Exception Handling, Functions, Procedures, Cursors, Triggers, Packages.
5. Application  
Design and develop any two of the following
  - Library Information System
  - Logistics Management System
  - Students' Information System
  - Ticket Reservation System
  - Hotel Management System
  - Hospital Management System
  - Inventory Control
  - Retail Shop Management
  - Employee Information System
  - Payroll System
  - Any other Similar System

Clearly mention the scope of the system. Use standard tools for expressing the design of the systems.

**UCS 6046 / UIT 6088 : COMPUTER NETWORKS LAB**

**LIST OF EXPERIMENTS**

1. Write a socket Program for Echo/Ping/Talk commands.
1. Create a socket (TCP) between two computers and enable file transfer between them.
2. Write a program to implement Remote Command Execution ( Two M/Cs may be used )
3. Write a program to implement CRC and Hamming code for error handling.
4. Write a code simulating Sliding Window Protocols.
5. Create a socket for HTTP for web page upload & Download.
6. Write a program for TCP module Implementation.(TCP services)
7. Write a program for File Transfer in client-server architecture using following methods.
  - . USING RS232C
  - . TCP/IP
8. Write a program to implement RMI (Remote Method Invocation)
9. Perform a case study about the different routing algorithms to select the network path with its optimum and economical during data transfer.
  - .Shortest path routing
  - .Flooding
  - .Link State
  - .Hierarchical
11. Broadcast /Multicast routing

**UIT 6089 : INDUSTRIAL TRAINING / VISIT (Report)**

In the course of study, during 5<sup>th</sup> and 6<sup>th</sup> semesters, each student is expected to undertake a minimum of five industrial visits (leading hardware manufacturing / software development concerns) or undertake a minimum of eight weeks / 60 days of industry training (in a reputed concern). Based on the industrial visits / training, the student has to submit a report at the end of sixth semester highlighting the exposure he/she gained. The report will be evaluated by the departmental committee for 50 marks. The proof for having undergone visits / training are to be enclosed along with report as enclosures.

**UCC 60810 : GENERAL PROFICIENCY - IV**

**UNIT I**

**RESUMES** : Introduction to Resumes; Types of Resumes; Organization of Resume Formats; Presenting Information and Content

**UNIT II**

**GROUP DISCUSSIONS/ ACTIVITIES** : Introduction; Defining Group Discussions; Types of Group Discussions; Preparation; Participation; Group Dynamics; Intra/Inter Dept. Group Discussions; Team-work; Negotiation Skills; Introduction to Organizational Behaviour; Language lab Practice

**UNIT III**

**INTERVIEWS** : Introduction; Honing Verbal and Non-verbal Skills; Rehearsing; Listening Skills; Taking the Interview; Facing Questions; Mock Interviews

**UNIT IV**

**QUANTITATIVE ANALYSIS** : Aptitude Tests; Psychometric Tests; Puzzles

**REFERENCE BOOKS:**

**UCS 7043 / UIT 7081 : INTERNET TECHNOLOGY AND WEB DESIGN**

**UNIT I**

Internet principles – Basic Web concepts – Client –Server model – Retrieving data from Internet -Protocols and applications. Web Design process: Web process Model-Goals and problems-design phase-Testing. Site Types and Architecture-Web site types-Dynamic Sites-site structures

**UNIT II**

Search and Design: Worldwide search-web searching overview-working of search engines-search engine promotion-optimization-Search interface. Web protocols-HTTP-DNS, Web Servers-components-software, web hosting. Browsers-HTML and Scripting languages-cookies- Multimedia in web design.

**UNIT III**

Web Technologies: Anatomy of xml document - xml markup-working with elements and attributes - creating valid documents-xml objects. ActiveX controls: Introduction-Building a basic control - OLE and ActiveX- HTML and ActiveX-ActiveX Documents.

**UNIT IV**

Streaming – Networking Principles – Sockets for Clients - Sockets for Servers – Protocols handlers – Content handlers – Multicast sockets – Remote method invocation.

**UNIT V**

Internet Security: The Internet-Understanding Firewalls-Hackers-TCP/IP from a security view point –sockets and services-Encryption. Firewall Technology-packet filtering-Network Address Translation-application level proxies-VPN- ideal firewall.

2. Pradeep.k and Sinha, “*Distributed operating systems*”, PHI, Newdelhi, 2001.

**UCS 7047 / UIT 7086 : INTERNET TECHNOLOGY LABORATORY**

Implement the following problems :

1. Creation of HTML Files
2. Working with Client Side Scripting
  - 1.0 VBScript
  - 2.0 JavaScript
3. Configuration of web servers
  - 1.0 Apache
  - 2.0 Internet Information Server(IIS)
4. Working with ActiveX Controls in web documents.
5. Experiments in JAVA
  - 1.0 Applets
  - 2.0 Threads
  - 3.0 Sockets
6. Working with Server Side Scripting
  - 1.0 Active Server Pages
  - 6.2 Java Servelets

**UCS 8046 / UIT 7087 : DISTRIBUTED COMPUTING LAB**

1. Simple exercises to learn the concept of RMI, Servlets, CORBA, COM and DCOM
2. Finding Simple and Compound interest using RMI
3. RMI-based implantation of Airline Reservation system
4. Servlet-based implantation of Airline Reservation system
5. Implementation of Mail Server
6. Implementation of Quiz Server
7. Implementation of ATM
8. Implementation of Online Shopping System
9. Implementation of matrimonial System.

### **UIT 7088 / UIT 8087 : PROJECT WORK PHASE-I AND PHASE-II**

The objective of the project is to enable the students to work in convenient groups of not more than three members in a group on a project of latest topic / research area / industrial applications. Each project group shall have a guide who is a faculty member.

During the *seventh semester*, the students are expected to undergo Phase-I of the project. The project group is required to do literature survey, formulate the problem and form a methodology of arriving at the solution of the problem. The departmental committee shall examine the students for 50 marks and the evaluation is based on continuous internal assessment comprising one seminar (15 marks), demo (15 marks) and one internal viva-voce (20 marks).

During the *eighth semester*, the students are expected to complete the project (Phase - II) and submit a full-fledged report comprising of the complete system developed along with implementation and test results. The departmental committee shall examine the students for 50 marks and the evaluation is based on continuous internal assessment comprising one seminar (25 marks) and demo for complete system developed (25 marks). At end of the semester, a viva-voce examination will be conducted for 100 marks (50 marks for internal examiner and 50 marks for external examiner).

### **UCS 7089 : SEMINAR**

The objective of the seminar is to encourage the students to work independently and to get exposure in latest technologies. The topic shall be chosen in consultation with a faculty member who would be the guide. Each student is expected to make a critical review of literature and prepare a report. The student is expected to present a seminar. The departmental committee will evaluate the performance of the students in the seminar and the report for 50 marks.

**UCS 804E6 / UIT 708E1 : INDUSTRIAL PSYCHOLOGY AND SAFETY MEASURES**

**UNIT I**

**INTRODUCTION :** Definition of Industrial Psychology – Methods and scopes of Industrial Psychology – Individual and situational differences in job performance – Concept of performance appraisal – Purpose of performance appraisal.

**UNIT II**

**MOTIVATION AND MORALE :** Definition of motivation – Motivational theories – Motivation Hierarchy of needs – Employees service programme – Employees morale – Planning a morale development programme.

**UNIT III**

**RECRUITMENT, SELECTION, PLACEMENT TRAINING AND DEVELOPMENT :** Recruitment policy – Recruitment from within and outside – Selection – A negative process – Personal qualities for selection – Selection procedure – Purpose and importance of training and development – Training and education – Executive development – Evaluation of training and development programme.

**UNIT IV**

**LEADERSHIP AND ORGANIZATIONAL COMMUNICATION :** The concept of leadership – Approaches to the study of leadership – Various styles of leadership – Organizational communication system – Information theory – Communication rate – Media of communication.

**UNIT V**

**INDUSTRIAL SAFETY AND WELFARE :** Introduction – Losses due to accidents – Measures of accidents – Causes, causes and preventive measure for accidents – Injury distribution – Accident proneness – An effective safety programme – Supervisor's role in accident prevention – Health and welfare programme.

**UIT 708E7 : TELECOMMUNICATION MANAGEMENT**

**UNIT I**

**Principles and evolution of switching system** Evolution of telecommunication – simple telephone communication – network structures – Network services- terminology – regulation – standards – OSI reference model for open systems – basics of switching system – manual switching system – rotary dial telephone – signaling tones - strowger switching components – step – by- step switching design for 100 line, 1000 line, 10000 line exchange – touch tone dial telephone – cross bar switching & exchange organization

**UNIT II**

**Space time and multistage switching:** Stored program control- centralized SPC- Distributed SPC- software architecture – application software – enhanced services- two stage networks – three stage networks - N stage networks- basic time division space switching – basic time division time switching – time multiplexed time switching – combination switching – three stage combination switching – n stage combination switching

**UNIT III**

**Traffic Engineering:** Network traffic load and parameters – grade of service and blocking probability – modeling switching systems – incoming traffic and service time charecterization – blocking models and lose estimates – delay systems. Grading : principle – design of progressive gradings – other forms of gradings – traffic capacity of gradings – applications of gradings

**UNIT IV**

**Switching hierarchy and signaling :** Subscriber loop systems – switching hierarchy and routing – transmission plans – transmission systems – numbering plan – charging plan. Signaling : Customer line signaling – audio frequency junction and trunk circuits – FDM carrier systems – PCM signaling – inter – register signaling – common channel signaling principles – CCITT signaling system No:6 - CCITT signaling system No: 7 - digital customer line signaling

**UNIT V**

Data networks and ISDN Data transmission in PSTN – switching techniques for data transmission – satellite based data networks – fibre optic networks – data network standards – protocol stacks – internetworking. ISDN: New services – network 4 protocol architecture – transmission channels – user network interface – signaling – numbering and addressing – service characterization –ISDN standards – intelligent networks – network management for both public and private telecommunication networks

**TEXT BOOKS:**

**UIT708E8 : FAULT TOLERANT SYSTEMS**

**UNIT I**

Introduction : Fault Prevention -Fault tolerance – anticipated and unanticipated Faults- Test generation for digital systems- Combinational logic. Network Boolean difference method test generation for sequential circuits- fault simulation.

**UNIT II**

Error Model : General coding scheme – Parity checking code- arithmetic code – code for computer memories –checking errors in logical operation – communication coding.

**UNIT III**

Fault Tolerance : Coding technique-fault tolerant self checking and fail safe circuits-fault tolerant in combinatorial and sequential circuits- synchronous and asynchronous fail safe circuits.

**UNIT IV**

Architecture : Fault tolerant computers - general purpose commercial systems-fault tolerant multiprocessor and VLSI based communication architecture.

**UNIT V**

Fault Tolerant Software : Design-N-version programming recovery block - acceptance tests-fault trees- validation of fault tolerant systems.

**TEXT BOOKS**

1. K.K.Pradhan, "*Fault Tolerant computing theory and techniques*", volume III. Prentice Hall, 2001
2. Anderson and Lee, "*Fault Tolerant principles and practice*", PH 1989.

**UCS 804E10 / UIT 708E9 : MOBILE COMMUNICATION NETWORKS**

**UNIT I**

Antennas and Propagation: Antennas, Propagation models, Line-of-sight communications, Fading in the mobile environment - Signal Encoding Techniques: Digital data and Analog signals, Analog data and Analog signals, Analog data digital signals, Modulation techniques - Spread Spectrum: Concept, Frequency hopping, Direct Sequence, CDMA – Coding and Error Control.

**UNIT II**

Satellite Communications: Parameters, FDM, TDM, GEO139, LEO 139, MEO 140, Routing, Localization – Cellular Networks: Principles, First generation Analog, Second Generation TDMA, Second generation CDMA, Third generation systems.

**UNIT III**

Telecommunication Systems: GSM, Architecture, Radio Interface, Protocols, Handover, Security – Cordless systems and WLL: IEEE 802.16, DECT – TETRA - UMTS and MIT 2000.

**UNIT IV**

Wireless LAN technology: Over view, Infrared LANs, Spread spectrum LANs, Narrow band microwave LANs – 802.11 protocol: Architecture, Services, Medium access control, Physical layer – Bluetooth technology: Overview, Radio Specification, Baseband Specification, Link Manager Specification, Logical Link Control and Adaptation Protocol.

**UNIT V**

Mobile IP: Goals, Assumptions, requirements, IP packet delivery, Agent advertisement and discovery, registration, Tunnelling and encapsulation, Optimization, Reverse tunneling, IPv6, Dynamic host configuration protocol – Ad hoc networking: Routing, destination sequence distance vector, dynamic source routing, hierarchical routing, Alternative metrics – Mobile TCP: Traditional TCP, Indirect TCP, Snooping TCP, Fast retransmit, selective retransmission, Transaction oriented TCP – WAP: Architecture, Protocol description.

**TEXT BOOKS**

1. W. Stallings, "*Wireless Communications and Networks*", Prentice Hall, 2002.
2. J. Schiller, "*Mobile Communications*", Pearson education, 2000.

**UIT 708E10 : NETWORK STANDARDS AND PROTOCOLS**

**UNIT I**

Infrastructure Transmission Media - Bandwidth and reliability considerations - Broadband access - Transmission media – xDSL, Cable modems, Fiber optics, Wireless - IEEE 802.1 Standards : IEEE 802.1D - LAN Bridging - Transparent Bridging - Expedited Traffic Capabilities - Selective Multicasting - IEEE 802.1Q - Virtual Bridged LANs. Advances in local area networks : Traffic Class Expediting, Dynamic multicast filtering, Virtual Bridged Local Area Networks.

**UNIT II**

Network Performance Aspects: Voice traffic- Layered video -Mixing/separating traffic types. Advances at the network layer : Review of IP unicast and multicast routing protocols - Resource ReSerVation Protocol (RSVP) and Integrated Services (IntServ) - Differentiated Services (DiffServ) Model : DiffServ architecture, A framework for differentiated services, Per hop behavior (PHB), Assured Forwarding PHB, Expedited Forwarding PHB, Interoperation of IntServ and DiffServ. Multiprotocol Label Switching (MPLS) : Framework and Architecture of MPLS, QoS and Traffic Engineering aspects of MPLS.

**UNIT III**

Internet Protocols : IP, ICMP, ARP, RARP, BOOTP, DHCP - Routing Protocols: Interior Gateway Protocols: GGP, RIP, OSPF - Exterior Gateway Protocols: EGP, BGP, Policy Routing - IP Multicast Routing IGMP, DVMRP, CBT, MOSPF, PIM, IP version 6, Multiprotocol Label Switching(IP Switching, Tag Switching)

**UNIT IV**

Advances in end-to-end transport protocols : Real-Time Transport Protocol (RTP), RTP and RTCP, RTP's audio/video profile, RTP's payload formats for voice and video. Advances in session layer protocols : Internet conferencing architecture and protocols - Session Description Protocol (SDP) - Session Announcement Protocol (SAP) - Session Initiation Protocol (SIP) - ITU's recommendations for audio-visual communication, H.320, H.323 - ITU's recommendation for data conferencing T.120 - IETF's Real Time Streaming Protocol (RTSP) - IP Telephony.

**UNIT V**

Voice, video, and data traffic characteristics, Voice Traffic, Voice Encoding Schemes and Standards, PCM, CELP, Vocoding, Voice Quality and Traffic Characterization. Video Traffic: Video Compression Schemes and Standards - H.261 (ITU) - MPEG-1

and MPEG-2 (ISO) - H.263 (ITU). Video Encoding Control Schemes: Constant Bit Rate (CBR) - Open-loop Variable Bit Rate (OL-VBR) - Constant-Quality Variable Bit Rate (CQ-VBR) - Video Quality and Traffic Characterization. Data Applications Traffic Characteristics: Telnet, SMTP, NNTP, FTP and HTTP traffic - TCP and its behavior.

3. Michael A. Miller, '*Data and Network Communications*', Vikas Publishing House, 2000.

**UCS 804E1 / UIT708E11 : VLSI DESIGN**

**UNIT I**

MOS DEVICES AND CIRCUITS: The MOS circuit fundamentals – Depletion and enhancement mode pull-ups – Transit times of clock period – Effects of Scaling down its dimensions of MOS circuits and systems. MOS PROCESS: Models of analyse transistor circuits – The MOS fabrication process – N MOS lambda based layout – rules(6).

**UNIT II**

DATA AND CONTROL FLOW IN SYSTEMATIC STRUCTURE: Notation – Two phase locks – Shift registers – Implementation – Dynamic registers – Designing subsystems – Register to register transfer – Combinational logic – sequential logic finite state machine.

**UNIT III**

SYSTEM LEVEL DESIGN: Design of an ALU Subsystem – Carry look ahead adders parallel multipliers – PLA – decoders – encoders – Multiplexers – Buses – Encoding and Control Operators data path chip.

**UNIT IV**

DESIGN SYSTEM CONCEPTS: Definitions – Steps in the design of a VLSI Part-Planning Logic design and simulation – Physical design –Placement and wiring –Development of routing algorithm – testing Design database –CAD Tools.

**UNIT V**

APPLICATION OF VLSI TO SOLVE COMPUTATION PROBLEM: Concurrency in computers- Algorithms for VLSI process array – Matrices vector multiplication – Convolution algorithm.

**TEXT BOOKS**

- 1.Pucknell D.Mshraghim.k, "*Basic VLSI Design,Principles and Applications*", Pretince Hall,1985.

- 1.Nacolm R.Haskard and Ian,C May, "*Analog VLSI Design NMOS and CMOS* ",Prentice Hall,1985.
- 2.Thomas E.Dillinger, "*VLSI Engineering*", Prentice Hall,1988.

**UNIT I**

Introduction : **History of AI - Intelligent agents - Nature of environments - structure of agents and its functions - problem solving agents - search strategies-solving problems by searching- Breadth-first - Depth-first - Depth-limited- Iterative deepening- Bidirectional - Informed search methods- A\*- AO\*- Adversarial search - Alpha-Beta Pruning.**

**UNIT II**

**Knowledge Representation:** Knowledge-Based Agent- logic -Propositional Logic - First-Order Logic (FOL) - quantifiers - Goal-Based Agent – knowledge engineering - Frame Systems and Semantic Networks - Scripts.

**UNIT III**

**Reasoning:** Reasoning patterns in propositional logic - Inference in First-Order Logic- Unification - Forward and Backward Chaining - Resolution - Reasoning systems - Theorem Provers - reasoning with default information - Truth Maintenance systems.

**UNIT IV**

**Planning :** Simple Planning Agent - from Problem Solving To Planning - Basic Representations For Planning - Practical Planners- Hierarchical Decomposition - Resource Constraints - Uncertainty - Probabilistic Reasoning Systems.

**UNIT V**

**Learning :** General Model Of Learning Agents - Inductive Learning - Computational Learning Theory Learning In Neural And Belief Networks - Reinforcement Learning - Types Of Communicating Agents – robotics: Tasks, Parts, Configuration Spaces, Navigation And Motion Planning.

**TEXTBOOK:**

1. Stuart J.Russell and Peter Norvig, "*Artificial Intelligence: A Modern Approach*", Pearson Education Asia, II edition, 2003.

**REFERENCE BOOKS:**

**UCS 8043 / UIT 8082 : EMBEDDED SYSTEMS**

**UNIT I**

Review of Embedded Hardware: Gates - Timing Diagram- Memory –microprocessors Buses-Direct Memory Access-Interrupts- Built-ins On the Microprocessor-Conventions used on Schematic-schematic. Interrupts Microprocessor Architecture-Interrupt Basics-Shared Data Problem-Interrupt latency

**UNIT II**

Microchip PIC Micro controller: Introduction, CPU Architecture- Registers- Instruction sets addressing modes- Loop timing- Timers- Interrupts, Interrupt timing, I/O Expansion, I<sup>2</sup>C Bus Operation Serial EEPROM, Analog to Digital converter, UART-Baud Rate-Data Handling-Initialization, Special Features – Serial Programming-Parallel Slave Port.

**UNIT III**

Embedded Microcomputer Systems: Motorola MC68H11 Family Architecture, Registers, Addressing modes Programs. Interfacing methods parallel I/O interface, Parallel Port interfaces, Memory Interfacing, High Speed I/O Interfacing, Interrupts-Interrupt service routine-Features of interrupts-Interrupt vector and Priority, Timing generation and measurements, Input capture, Output compare, Frequency Measurement, Serial I/O devices RS 232,RS485.

**UNIT IV**

Software Development: Round–Robin, Round robin with Interrupts, function-Queue-Scheduling Architecture, Algorithms. Introduction to - Assembler- Compiler -Cross Compilers and Integrated Development Environment (IDE). Object Oriented Interfacing, Recursion, Debugging strategies, Simulators

**UNIT V**

Real Time Operating Systems: Task and Task States, Tasks and data, Semaphores and shared Data Operating system Services-Message queues-Timer function-Events-Memory Management, Interrupt Routines in an RTOS environment, Basic design using RTOS.

**TEXT BOOKS**

## UIT 8083: INFORMATION CODING TECHNIQUES

### UNIT I

Information entropy fundamentals: Information, entropy, properties of information and entropy, relation between information and probability, mutual and self information, coding theory, code efficiency and redundancy, Shannon's theorem, construction of some basic codes.

### UNIT II

Data and Voice Coding: Lossless predictive, Run-length, Ziv-Lempel coding, voice coding, modulation, linear predictive coding, silence coding and sub-band coding.

### UNIT III

Image and video compression: Quantization, JPEG standards, motion compensation, MPEG-1, MPEG-2, MPEG-4 standards.

### UNIT IV

Error Control Coding: Linear Block Codes for Error Correction, Cyclic Codes, Bose-Choudhuri Hocquenghem codes, Convolution Codes, Trellis Coded Modulation.

### UNIT V

Cryptography: Overview of encryption techniques, symmetric cryptography, Data Encryption Standard (DES), International Data Encryption Algorithm (IDEA), RC Ciphers, Public-key algorithm, RSA algorithm, Pretty Good Privacy, One-way Hashing.

### TEXT BOOKS

1. Viterbi, "Information theory and coding", McGraw Hill, 1982. (Unit I to III)
2. Ranjan Bose, "Information theory, coding and cryptography", Tata McGraw Hill, 2002. (Unit IV and V)

### REFERENCE BOOKS

1. John G. Proakis, "Digital Communications", 2<sup>nd</sup> Edition, McGraw Hill, 1989.
2. K. Sayood, "Introduction to Data Compression", Morgan Kaufmann Publishers, 2000.

**UIT8086 : ADVANCED SOFTWARE LAB**

1. Study of PIC Micro Controller and MC68H11 development kit
2. Interfacing and Programming LEDs and key switcher
3. Real Time Clock
4. Rotary Pulse Generation
5. Frequency Measurement
6. DC motor Speed Control and Measurement
7. Asynchronous Serial Communication
8. PWM Generators
9. LCD display interfacing
10. I<sup>2</sup>C interface and Programming
11. System Design using RTOS
12. USB interfacing
13. Implementation of Searching algorithms
  - . Breadth First Searching
  - . Depth First Searching
  - . A\*
14. Implementation of game trees
  - . Single player game
  - . Two player game
15. Representation of knowledge for simple game using Predicate Logic
16. Implementation of Resolution and Unification algorithms.

**UIT 8088: COMPREHENSIVE VIVA VOCE**

The students will be tested for their understanding of subjects of study in the curriculum from 3<sup>rd</sup> semester to 8<sup>th</sup> semester. A comprehensive examination, preferably with objective type questions, will be conducted and evaluated the performance of the students for 50 marks. A comprehensive viva voce examination will be conducted for 50 marks with one internal examiner and one external examiner appointed by the University.

**UCS 704E7 /UIT 808E1 : ADVANCED DATABASES**

**UNIT I**

Object Based Databases and XML: Object Oriented Databases – Object Relational Databases – XML

**UNIT II**

Database System Architecture: Database System Architecture – Distributed databases – Parallel Databases

**UNIT III**

Query Processing – Query Optimization – Application Development and Administration – Advanced Querying and Information Retrieval (Data Mining and Warehousing) - Advanced Data Types and New Applications (Multimedia Databases) – Advanced Transaction Processing

**UNIT IV**

Case Studies: Oracle – IBM DB2 Universal Database – Microsoft SQL Server

**UNIT V**

Database Technologies: ODBC, ADO, RDO, DAO, JDBC, JSQL

**TEXT BOOK**

1. Silberschatz, Korth, Sudarshan, “*Database System Concepts*”, 4<sup>th</sup> Edition – McGraw-Hill Higher Education, International Edition 2002. Chapters: 8 to 10, 18 to 20, 13, 14, 21, 22, 23, 24, 25 to 27.

**UIT 808E2 : SATELLITE COMMUNICATION SYSTEMS**

**UNIT I**

ORBITAL ASPECTS OF SATELLITE COMMUNICATION : Orbital mechanics – orbital equation – orbital elements – orbital perturbation tracking and orbital determination – orbital correction /control

**UNIT II**

SPACE CRAFT : Space craft sub systems , communications subsystem – space craft antennas – thermal control – propulsion sub system – generation storage and conditioning of power systems.

**UNIT III**

SATELLITE LINK DESIGN: Basic transmission theory – system noise temp – noise figure and G/T ratio – design of down links – up link design – link budget analysis – design of satellite links for specified performance.

**UNIT IV**

MULTIPLE ACCESS TECHNIQUES: Frequency division multiple access – preassigned FDM/FM/FDMA – SPADE operation – time division multiple access – high rate TDMA – frame operation – CDMA – Comparisons of the various access techniques.

**UNIT V**

EARTH STATION TECHNOLOGY: Factors influencing the choice and location of an earth station – equipment for earth stations – antenna systems – overall block diagram – applications of satellite communication systems.

**TEXT BOOKS:**

1. T.Pratt and C.W .Bostian : “*Satellite Communication* “, Wiley & sons ,2002.
2. B.N.agarwal; “*Design of geosynchronous spacecraft* “,Prentice hall ,2003.

**UCS 804E9 / UIT 808E3 : OPTICAL COMMUNICATION NETWORKS**

**UNIT I**

Introduction, First generation and second generation optical networks, Optical Layer, All-Optical Networks, Transmission Basics, Fibers and Amplifiers.

Wavelength Division Multiplexing (WDM) Network Elements: Optical Line Terminals, Optical Line Amplifiers, Optical Add/drop Multiplexers. Optical Cross Connects - Enabling Technologies - WDM Optical Network Architectures: Broadcast and Select Networks, Wavelength Routed Networks – MAC protocols for Broadcast and select networks.

**UNIT II**

Wavelength routing algorithms: Classification, RWA algorithms, Fairness and Admission control, Distributed Protocols – Wavelength Convertible Networks: Need and Structure, Routing in Convertible Networks – Rerouting Algorithms: Benefits, Issues, Lightpath Migration, Rerouting Schemes, AG and MWPG methods.

**UNIT III**

Virtual Topology Design: Sub-problems, Problem formulation, Design Heuristics, Regular Topology Design, Graph coloring – Virtual topology reconfiguration: Need, Reconfiguration due to traffic changes.

**UNIT IV**

Control and Management: Network Management Functions, Optical Layer Services, Layers, Fault Management, Configuration Management, Connection Management – Network Survivability: Basic concepts, Protection in SONET and IP Networks, Optical Layer Protection Schemes, Multiplexing Techniques, Provisioning.

**UNIT V**

Optical Internets: Optical Circuit Switching, Burst Switching, Packet Switching, Access Networks: FTTC, Optical Multicast Routing: Node Architecture, Source based and Steiner Tree based Multicast tree generation.

**TEXT BOOKS:**

1. Rajiv Ramaswami and Kumar N. Sivarajan, *Optical Networks – A Practical Perspective*, Morgan Kauffmann Publishers, 2002.
2. C. Siva Ram Murthy and G. Mohan, *WDM Optical Networks – Concepts, Design, and Algorithms*, Printice Hall India, 2002.

**UIT 808E4: KNOWLEDGE BASED SYSTEMS**

**UNIT I**

Introduction: Definition-Architecture – Difference between conventional and expert system programs.

**UNIT II**

*Knowledge Representation And Formal Logic: Knowledge components –Levels of representation – Knowledge representation schemes –formal logic – Knowledge engineering and inference – Process – Semantic networks- frames – Scripts – Production systems.*

**UNIT III**

Knowledge Acquisition: Knowledge engineering - Knowledge acquisition techniques – Concept formalisation – Knowledge representation development – Knowledge acquisition for core problems-knowledge acquisition prior knowledge.

**UNIT IV**

Problem Solving Strategies : Exhaustive search – Large search spaces – Planning – Least commitment – Principle and constraint propagation- Classification and black board models.

**UNIT V**

Expert System Tools: Languages for Expert system development – Expert system shells - Lisp machines – PC-based Expert system tools.

**TEXT BOOK:**

1. Ralston, D.W., “*Principles of Artificial and Expert Systems Development*”, McGraw – Hill Book Company International.

**REFERENCE BOOKS :**

3. John F Sowa, “*Knowledge Representation*”, Logical, Philosophical and Computational Foundations.

**UCS 804E5 / UIT 808E5 : NETWORK ADMINISTRATION AND  
MANAGEMENT**

**UNIT I**

Network Management goals, organization, and functions- Network monitoring-Network control-Network management tools-network statistics measurement systems-Network management systems-Commercial network management systems-System management-Enterprise management solutions.

**UNIT II**

SNMPv1 Network management organization and communication function models-structure of SNMP management information-standards-SNMPv2 system architecture-protocol-specification-SNMPv3 architecture.

**UNIT III**

Remote network monitoring concepts-Group management-RMON alarms-practical issues-ARM network management-Telecommunication network management-TMN conceptual model-architecture-Network management applications.

**UNIT IV**

Administering windows NT systems- startup-shutdown and server configuration-user accounts-managing process-risk and file system-backups-Network configuration-Print services-Security-

**UNIT V**

Linux Administration- Routing-Network hardware-Domains Name Systems-Sharing system files-E-mail-Network management and debugging-Security

**TEXT BOOKS**

1. Evi Nemeth, Garth Snyder, Trent R. Hein, “*Linux Administration Handbook*”, Prentice Hall 2002 .
2. Aeleen Frisch, “*Essential Windows NT system Administration*”, O’Reilly & Associates Inc., first edition,Jan 1998.
3. Mani Subramanian, “*Network Management,Principles and Practice*”, Addison Wesley, 2000.

2. Ulyess Black, “*Network management standards*”, McGraw Hill 1995.
3. William Stallings, “*SNMP, SNMP v2, SNMP v3 and RMONI*” ,2 and 3<sup>rd</sup> Edition, Pearson Education Asia 1999.

**UIT 808E6 : GIS AND REMOTE SENSING**

**UNIT I**

Introduction : Maps – Definition – Types of Maps – Characteristics of Maps – Map Projections – GIS – Definition – Components of GIS – Hardware, Software and Organizational Context – GIS software; Data Input : Data Types – Spatial and Non-Spatial – Spatial Data – Points, Lines and Polygons – Non-spatial data – Nominal, Ordinal, Interval and Ratio – Digitizer – Scanner – Editing and Cleaning – Geo-referencing.

**UNIT II**

Remote Sensing : Data collection, Data types - EM spectrum, Radiation and Earth - Simulated and False-color Images - LUTs and Band Correlation these web sites Image enhancement. Remote sensing of the Earth's surface utilizing the electromagnetic spectrum. Techniques of photography, Multispectral Scanning, and Microwave Imagery from Airplane, Satellite, and manned-spacecraft platforms. Image interpretation, practical applications in earth science and use of remotely sensed data in geographic information systems.

**UNIT III**

Data Structure and Analysis : Raster and Vector Data Structure – Raster data storage – Run length, Chain and Block Coding – Vector Data Storage – Topology – Topological Models – ArcNode Structure – Surface Data – DEM – Gridded DEM and TIN structure- Applications of DEM

**UNIT IV**

Data Analysis and Data Quality : Reclassification – Measurement – Buffering – Overlaying – SQL for Queries – Neighbourhood and zonal operations – Data Quality – Components of data quality - Sources of errors in GIS – Meta data

**UNIT V**

Data Output and GIS Applications : Output – Maps, Graphs, Charts, Plots, Reports – Printers – Plotters – Fields of application – Natural Resource Management, Parcel based, AM/FM applications examples – Case study: Urban growth studies using GIS

**TEXT BOOKS :**

1. Peter A. Burrough and Rachael A. McDonnell, 'Principles of Geographical Systems', Oxford, University Press, 1988.
2. Anji Reddy Star J. and Estes. J., “GIS – An Introduction”, Prentice Hall, USA.

### UCS 704E10 / UIT 808E7 : E-BUSINESS

#### UNIT I

e-Commerce and e-Business, e-Business trends, e-Business design:- Construction, Self diagnosis, Reversing the value chain, Choosing a narrow focus. e-Business Architecture:- Importance of Application Integration, New era of Cross Functional Integrated Applications, Integrating Application Clusters into an e-Business Architecture, Aligning the e-Business Design with Application Integration.

#### UNIT II

Customer Relationship Management:- Need for Customer Relationship Management, Defining CRM, New CRM Architecture, Supporting Requirements of the Next-Generation CRM Infrastructure, Organizational Challenges in Implementing CRM, Next-Generation CRM Trends. Selling-Chain Management:- Definition, Business Forces & Technology forces driving the need for Selling-Chain Management, Order Acquisition Process Management, Elements of Selling-Chain Infrastructure.

#### UNIT III

Enterprise Resource Planning:- Definition, ERP Decision, ERP usage in the Real World, ERP Implementation, Future of ERP Application. Supply Chain management:- Definition, Basics of Internet enabled SCM, e-Supply Chain Fusion, e-Supply Chain Fusion Management Issues, e-Supply Chains in 200X.

#### UNIT IV

e-Procurement:- Procurement as Top Management Issue, Operating Resource Procurement, Procurement Business Problem, Next Generation Integrated Procurement Applications, Elements of Buy-Side e-Procurement Solutions, Buy-Side Applications for the Procurement Professional, Elements of Sell-Side e-Procurement Solutions.

#### UNIT V

Developing the e-Business Design:- Knowledge Building, Capability Evaluation, e-Business Design, e-Business Design in Action: The case of E\*TRADE. Translating e-Business Strategy into Action.

#### TEXT BOOK

1. Ravi Kalakota and Marcia Robinson, “*e-Business: A Roadmap for Success*”, Addison-Wesley, 2000.

#### REFERENCE BOOKS

2. Shurtey, “*e-Business with Net Commerce*”, Pearson Education, 2003.

**UIT 808E8 : DIGITAL SIGNAL PROCESSING**

**UNIT I**

Discrete time signal analysis and Linear systems: causality, stability-system characteristics-typical discrete-time signals-operation on signals-properties of linear time-invariant digital systems-fourier transform relationship-sampling analog signals and sampling rate conversions.

**UNIT II**

Z-transform: properties of Z-transform-inverse z-transform-analysis of discrete time systems-realisation of digital linear systems-network definitions and operations IIR and FIR Realisation

**UNIT III**

Digital filter design: Analog filter approximation Butter worth, chebyshev and elliptic filters –frequency band transformations-digital filter design equations, low pass, high pass, band pass, band stop, IIR and FIR digital filter procedures. FIR half band digital filters –digital networks for linear phase FIR digital filters-introduction to computer-aided design of FIR and IIR digital filters.

**UNIT IV**

Discrete fourier transform(DFT) and Inverse discrete time fourier transform: Properties-circular convolution DFT frequency response characteristics-weighting function-fast fourier transform(FFT)-decimation-in-time(DIT) Algorithm – decimation-in-frequency algorithm-FFT radix-4 DIT implementation fast convolution procedures.

**UNIT V**

Finite register length effects: Quantization noise introduced by analog to digital conversion-finite register length effects in realization of IIR and FIR digital filters and in DFT computation. Introduction to signal processing system: signal processor application considerations-signal processing system design methodology.

**TEXT BOOKS:**

1. Sanjit K. Mitra, "Digital Signal Processing – A Computer Based Approach", 2<sup>nd</sup> Edition, Tata McGrawHill 2001.

**UIT 808E9 : WEB ADVERTISING AND MARKETING**

**UNIT I**

Introduction: Internet Principles – Basic Web Concepts – Client/Server model – Retrieving data from Internet – HTML and Scripting Languages – Standard Generalized Mark-up Language – Next Generation Internet – Protocols and applications. Introduction to How Web Advertising Works, Banner Ads – Sidebar Ads – Varied Shapes and Sizes – PopUp and PopUnder – Floating Ads.

**UNIT II**

Enterprise Application development environment : Web servers – Server Administration – IDL – Database Connectivity – Web Application architecture – Distributed Web Applications – Remote method Invocation – Web Customization – Mark Up Languages.

**UNIT III**

E-Business Applications: E-Business Frame Work – E-Business Cycle – E-Commerce Strategies – E-Business Architectures – Stored Procedures – SQL Procedures – Electronic Payment Services - Shopping Functions.

**UNIT IV**

Business and the Marketing Concept : How to Make a Web Page - Elements of Good Web Site Design - Starting a Business Online - Server Services - Domain Names - Web Oriented Industries. Online Marketing – Email Marketing – Search Engine Marketing – Banner Ad Placement – Link Exchange.

**UNIT V**

Real Time Applications: Role of scripting languages – Shopping Cart – Home Banking Applications – Design and Implementation – Fire Wall – Business models – Tools usage.

**UCS 804E8 / UIT 808E10 : •NET FRAMEWORK AND APPLICATIONS**

**UNIT I**

Introduction: The Microsoft .NET Initiative - The Microsoft .NET Framework - First .NET Framework Application - **Types and Exceptions:** .NET Framework Data Types - Dynamic Linking - Exception Handling - The .NET Framework Class Library - **The .NET Framework Class Library:** File and Stream I/O - Collections - Regular Expressions - Internet Classes - Data Access - Reflection - **Windows Forms:** The Windows Forms Programming Model - Controls - Dialog Boxes - Windows Forms and Visual Studio .NET .

**UNIT II**

**Web Forms:** Web Application Primer - The Web Forms Programming Model - Code-Behind Programming - Web Forms and Visual Studio .NET - **Web Controls:** Simple Controls - Button Controls - List Controls - Data-Bound Controls - Validation Controls - Odds, Ends, and the WebControl Base Class - **User Controls:** User Control Fundamentals - The XmlNavBar Control - Dynamic Loading (and Cookies) - Fragment Caching - **Custom Controls:** Custom Control Basics - Postbacks and Postback Data - Composite Controls - Server Controls and Client-Side Scripting - Graphical Controls.

**UNIT III**

**Web Applications:** Structure of an ASP.NET Application - The Web.config File - The Global.asax File - Application State - The Application Cache - Session State - **ASP.NET Security:** Understanding Web Security - Windows Authentication - Forms Authentication - **Web Services:** Web Services - Web Service Clients - The CityView Application .

**UNIT IV**

**ADO.NET:** A Tale of Two Providers - Connections, Commands, and DataReaders - DataSets and DataAdapters – **XML:** XML Primer - Reading and Writing XML -. XPath - XSL Transformations (XSLT).

**UNIT V**

**Multithreading:** Threads - Thread Synchronization - Thread Pooling – **Remoting:** Remoting Basics - Advanced Remoting.

### **UIT 808E11 : SOFTWARE QUALITY MANAGEMENT**

#### **UNIT I**

**INTRODUCTION :** Software Process assessment overview - Quality management - Quality assurance plan - Considerations - Verification and Validation - Concepts of Quality Control, Quality Assurance, Quality Management - Total Quality Management; Cost of Quality; QC tools - 7 QC Tools and Modern Tools; Other related topics - Business Process Re-engineering - Zero Defect, Six Sigma, Quality Function Deployment, Benchmarking, Statistical process control.

#### **UNIT II**

**CONFIGURATION MANAGEMENT :** The need for configuration Management - Software product nomenclature - Basic configuration management functions - Baselines - Responsibilities - Need for automated tools - Configuration management plan - SCM support functions - The requirement phase Design control - The implementation phase - Test phase - SCM for Tools - Configuration accounting and audit.

#### **UNIT III**

**SOFTWARE STANDARDS AND INSPECTION :** Definitions - The Reason for software standards - Benefits of standards - Establishing standards - Guidelines - Types of reviews - Inspection of objectives - Basic inspection principles - The conduct of inspection - Inspection training Models for Quality Assurance-ISO-9000 - Series, CMM, SPICE, Malcolm Baldrige Award – quality management models.

#### **UNIT IV**

**TESTING AND MANAGING SOFTWARE QUALITY :** Testing principles - Types of tests - Test planning - Test development - Test execution and reporting - Test tools and methods - Real Time testing - quality management paradigm - Quality motivation - Measurement criteria - Establishing a software quality program - Estimating software quality.

#### **UNIT V**

**DEFECT PREVENTION :** Principles of software defect prevention - Process changes for defect prevention - Defect prevention considerations - Managements role - Framework for software process change - Managing resistance to software process change - Case studies

#### **TEXT BOOKS**

1. Watts S. Humphrey, *"Introduction to the Team Software Process"*, Addison Wesley, 2000.
2. Watts S. Humphrey, *"Introduction to the Personal Software Process"*, Addison

## Curriculum & Syllabi (Information Technology)

---

Wesley,2000.

3. Watts S. Humphrey, "*Managing the Software Process*", Addison-Wesley, 1999

4. Stephen H.Kan , "*Metrics and models in software quality engineering*", 2<sup>nd</sup> Edition, Addison - Wesley, 2003.

**LIST OF INTERDEPARTMENTAL ELECTIVES  
( UID 5005 & UID 6005 )**

**UID : 011 - EXPERIMENT STRESS ANALYSIS**  
(Offered by Civil Engineering)

**Unit –I**

Experimental stress analysis – its scope and importance characteristics of ideal strain gauge – Mechanical- optical – acoustical – inductance – capacitance strain gauges.

**UNIT –II**

Electrical resistance strain gauges – gauge characteristic and types – selection of gauges – gauge factor – gauge materials – transverse sensitivity - rosettes – analysis of stress and strain using rosettes – circuiting – equipment for recording static and dynamic strains - load , pressure and displacement transducers.

**UNIT –III**

Model analysis – direct and indirect models – law of structural similitude – choice of scales – model materials – limitations of model studies – Buckingham Pi theorem - design of direct and indirect models – begg’s deformer and its application

**UNIT –IV**

Two dimensional photo- elasticity - optical principles stress optical law – methods of producing isoclinics and isochromatics – methods measuring fractional fringe orders model materials – methods for separating principle stresses.

**UNIT –V**

Photo elastic coatings  
Moire fringe and brittle lacquer techniques  
Introduction to stress freezing techniques

**Test Books**

1. V.M. Vazirani, S.P Chandola, “Experimental stress Analysis”,Khanna publishers,1988
2. L.S Srinath “Experimental stress Analysis” Tata McGrand Hill, New Delhi , 1984
3. Experimental stress Analysis, Dr. Sadhu Singh, Khanna Publishers ,1982

**Reference**

James W Dalley and William F Riley “ Experimental Stress Analysis” Tata McGrand Hill, 1965.

**UID 012 - COMPUTER AIDED PLANNING AND DRAFTING  
(Offered by Civil Engineering)**

**UNIT –I**

Introduction - Creating New drawing – Opening existing drawings – working with tool bars – using short cut menus – pointing devices- setting drawing units- modifying AutoCAD environment – viewing and updating drawing properties – modifying tool bars

**UNIT –II**

Using commands and systems variables – creating objects – Hatching drawing with previsions – controlling the drawing display – Editing method - using layers and object properties – auditing text to drawing – creating dimensions .

**UNIT –III**

Using blocks and external reference – management content with auto cad design centre – creating a layout to plot – plotting drawings batch plotting – using scripts files – working three – dimensional space – interactive veering in 3D – creating three – dimensional object

**UNIT –IV**

Rendering and imaging – using 3D images- drawing 3D models creating hidden –line images – using render with related applications. Working with raster image –managing raster images- accessing raster image using internet- modifying images and image boundaries

**UNIT –V**

Creating compound documents with OLD – linking and embedding information –using information from other application in AutoCAD. Accessory external database-working with table data- creating labels – accessing the internet visual Lisp and auto Lisp – VBA and active X automation

**Text Books**

1. Introduction to AutoCAD 2002 by J.T Roberts
2. Introduction to AutoCAD 2002 by George Omura
3. Introduction to AutoCAD 2002 by A. Yarwood

**Reference**

1. 3D Modelling in AutoCad by John EL Wilson Arnie Willians - 2002

**UID 021 – MECHATRONICS**  
(Offered by Mechanical Engineering)

**Unit – I : Introduction**

Introduction to Mechatronics – Mechatronics in Products – Mechatronics in Engineering Design – Measurement Systems – Electronics for Mechanical – Mechanical System for Electronics. System Response – Dynamic Characteristics of Systems – zero order - First order – Second order – System Modeling and analogies.

(9 hours)

**Unit – II : Amplifying and Digital Circuits**

Amplifier – Operational amplifier – Instrumentation amplifier – comparator. Digital Representations – Boolean algebra – Design of logic Network – Flip flops – Application of flip flops – Special purpose Digital integrated circuits.

(9 hours)

**Unit – III : Microprocessor and Data Acquisition**

Microprocessors and micro Computers – Micro Controllers – Numeric key board – LCD Display – Method to Design a Micro controller based system. Data acquisition – quantizing theory – Analog to Digital conversion – Digital to Analog conversion.

(9 hours)

**Unit – IV : Sensors and PLC**

Performance Terminology – Semi conductor Sensors and micro electro mechanical Devices - Actuators – Hydraulics Actuators – pneumatic Actuators. Programmable Logic Controllers (PLC) – basic structure – input / output processing – programming – Mnemonics Timers – relays and counters – data handling – selection of PLC.

(9 hours)

**Unit – V : Control Architecture and Mechatronic Systems**

Control architecture – Analog – Digital – Micro Controller – Single Board Computer – personal Computer designing. Case studies of Mechatronic system. Introduction to design of Mechatronic systems - Coin counter - Robotics - Magnetic Bearings etc..

(9 hours)

**Text Books :**

1. David G.Alciatore and McGraw Mecheal.B.Histand - Introduction of Mechatronics and Measurement Systems, Hill InternationalEditio, 1999.
2. HMT - Mechatronics, Tata McGraw Hill Publishing Company Ltd., 1998.
3. Lawrence J.Kamm - Understanding Electro – Mechanical Engineering, An Introduction to Mechatronics”, Prentice Hall, 2000.

**UID 022 - TOTAL QUALITY MANAGEMENT**  
(Offered by Mechanical Engineering)

**Unit – I**

Introduction to TWM – Strategies concepts and objectives – Total quality model – TQM as applied to Indian Industries – Quality circle concepts – concepts, objectives and functions of quality circles – Benefits of the organization – Training of quality Circle members – Implementation.  
(9 hours)

**Unit – II**

Tools and Techniques – The seven management tools =- Technique for analyzing a quality process – Statistical process Control – Introduction to S-S concepts  
(9 hours)

**Unit – III**

Cost of quality – Taguchi's quality loss function – House keeping concepts for industries, tool room, production shop – processing industries.  
(9 hours)

**Unit – IV**

Quality based product and process Design – Design for reliability – Design for maintainability – Quality Function Deployment (QFD) – QFD and Quality Assurance – QFD Principles, Concepts and applications – case studies.  
(9 hours)

**Unit – V**

KAIZEN Concepts – Kaizen by TQC – POKA YOKE ISO 9000 certification system – 9001 to 9004 systems – procedures, audits and reviews – case studies.  
(9 hours)

**TEXT / REFERENCE BOOKS**

1. S.M.Sundara Raja : Total Quality Management Tata Mc Graw Hill, 1998.
2. Patrick.J.Sweeney(editor) : TQM for Engineering, Quality Resources, Newyork, 1993.
3. John Bank : The Essence of Total Quality Management, Prentice Hall of India, 1998.
4. James I Bossert, : Quality Function Deployment, ASQC quality press, Wisconsin, 1994.

**UID 031 - COMMUNICATION ENGINEERING**  
(Offered by Electronics & Communication Engineering)

**UNIT – I**

Modulation – Need for modulation – Amplitude modulation – frequency spectrum – Power relation – different types of modulators – SSB and VSB generation. AM transmitters – Block diagram – functions of each block – high level transmitters.

**UNIT – II**

Angle modulation – principle of Frequency and Phase modulation – Relation between FM and PM waves – Bandwidth of FM – Narrow band wide band FM – Generation of FM wave – Direct and Indirect methods – FM transmitters – Block diagram – functions of each block.

**UNIT – III**

Detection and Receivers – Detection – Diode detectors – Synchronous detection – FM detectors – slope detectors – Phase discriminators – Ratio detectors.

Receiver – different types – super-heterodyne receivers – Block diagram – Choice of IF and Oscillator frequencies – Tracking – alignment – AVC, AFC – Receiver characteristics.

**UNIT – IV**

Pulse modulation systems – Sampling theorem – Pulse amplitude modulation – Channel bandwidth for PAM – detection of PAM signals – Pulse time modulation – generation of PDM and PPM – conversion of PDM and PPM – conversion of PDM to PPM – detection of PTM signals – Pulse code modulation – quantization – PCM systems – Encoder – decoder – Time division multiplexing – Frequency division multiplexing.

**UNIT – V**

Broadband communication system (Block Diagram Approach) – Telegraph system – Tele printer and Facsimile system – Telephone system – crossbar and electronic exchanges – Television system – microwave communication and optical communication systems – Principle of satellite communication – computer communication – Electronic Mail.

**Text Books:**

1. G. Kennedy, “Electronic Communication Systems”, McGraw Hill, 1984.
2. Wayne Tomasi, “Electronic Communications Systems – Fundamentals Through advanced”, 4<sup>th</sup> Edition, Pearson Education, 2001.

**References:**

1. Taub and Schilling, “Principles of Communication Systems”, McGraw Hill, 1989.
2. Bruce Carlson, “Communication Systems”, McGraw Hill, 1985.

**UID 032 - COMPUTER NETWORKS**

(Offered by Electronics & Communication Engineering)

**UNIT I**

**Data Communication Concepts:** Transmission media – Data encoding – Interface and modems – Multiplexing – Error detection and correction – Digital subscriber line – Circuit switching – Packet switching – Message switching.

**UNIT II**

**Wide Area Networks:** ISO-OSI layered architecture – Function of the layers – Data link protocols – HDLC, LAPB, LAPD, Inter networking devices – Repeaters, bridges, routers, routing algorithms – Distance vector routing, link state routing, X.25 protocol, congestion control.

**UNIT III**

**Frame Relay and ATM Networks:** Frame relay operation – Layers and traffic control; ATM networks – Architecture switching, Layers service classes.

**UNIT IV**

**Local Area Networks:** LAN topology – Ethernet – Token bus – Token ring – FDDI – Wireless LAN, ATM LAN – IEEE 802 Medium access control layer standard – Random access protocols – ALOHA – Slotted ALOHA.

**UNIT V**

**OSI Layers:** Transport layer issues – Session layer – Synchronization – Presentation layer – Encryption, decryption, Application layer – Message handling system, file transfer, virtual terminal – E-mail.

**Text Book:**

Achyut S. Godbole, Atul Kahate, “Computer Communication Networks”, Tata McGraw Hill, New Delhi, 2004.

**References:**

1. Andrew. S. Tanenbaum, “Computer Networks”, PHI, 1956.
2. W. Stallings, “Data and Computer Communication”, Second Edition, New York, Mc Millan, 1988.

**UID 041 - RELATIONAL DATABASE MANAGEMENT SYSTEMS**

**(Offered by Computer Science & Engineering)**

**UNIT I**

Introduction to Database Systems-applications-Comparison with file systems-Data models-View of data-database languages-database users and administrators -Transaction management system structure-application architecture-constraints-keys-Design issues.

**UNIT II**

Entity\_Relationship Diagrams-Relational model-structure of relational database: basic structure-Schema-Fundamentals of Normalization-1NF, 2NF, 3NF-Introduction to Query languages.

**UNIT III**

Introduction to Oracle-Introduction to PL/SQL: Why PLSQL-Features of PL/SQL-PL/SQL Block-lexical units-variable declaration-PL/SQL types-PL/SQL Control Structures-PL/SQL records and tables-SQL statement-DML-pseudo columns –grant and revoke privileges -transaction control. Built in SQL functions: character functions, numeric-date-conversions-group and other functions.

**UNIT IV**

Cursors: Introduction-fetch loops-variables-subprograms : creating procedures and functions, subprogram locations and dependencies-privileges-packages-Triggers-error handling.

**UNIT V**

Introduction to Microsoft SQL Server-MY SQL-MS ACCESS. Case Studies: Material Management-Library Information System.

**TEXT BOOKS**

1. "Database System Concepts" – Silberschatz And Korth, McGraw Hill-Fourth Edition,2002.
2. "Oracle 8: PL/SQL Programming" – Scott Urman, Oracle Press, Tata McGraw Hill, 1999.

**UID 042 - VISUAL PROGRAMMING**

(Offered by Computer Science & Engineering)

**UNIT I**

**INTRODUCTION:** Operating System fundamentals: DOS-WINDOWS. Features of Object Oriented Programming: Abstraction-Encapsulation-Inheritance-Classes-Derived classes-Virtual functions-Streams.

**UNIT II**

**VB INTRODUCTION:** Datatypes and Variables-Keywords-Statements-Controls and forms: types-properties-events-methods. Built-in: functions-procedures. User-defined: functions-procedures-properties.

**UNIT III**

**DATA OBJECTS:** Open Data Base Connectivity (ODBC)-Active Data Objects (ADO)-Data Access Objects (DAO)- Active X Data Objects and Data Connection (ADODC)-Data environment-Data report-ADODC based controls.

**UNIT IV**

**APPLICATION DEVELOPMENT AND AUTOMATION:** MDI-Menu-Toolbar-Active X-Mouse events- OLE based Automation-Class-Modules-DLL.

**UNIT V**

**VC++ INTRODUCTION:** Windows console application-AppWizard-MFC introduction-Windows MFC application.

**TEXT BOOKS:**

1.Gary Cornell, '*Visual Basic 6.0*', Tata McGraw Hill, 1998.

2.C.H. Pappas, W.H. Murray, III '*Visual C++: The Complete Reference*', Tata McGraw Hill, 1999.

### UID 051 - INTRODUCTION TO SOFT COMPUTING (Offered by Electrical & Electronics Engineering)

#### UNIT-I

Fuzzy systems: Crisp sets – Fuzzy sets – Operation and properties. Fuzzy relations – Equivalence and tolerance relations. Fuzzy membership function- types and definitions. Membership value assignments – Rule based systems. Type of fuzzy inference. Structure and parameters of a Fuzzy system- computer assignment.

#### UNIT-II

Neural Networks: Biological inspiration – Neuron model and Network architectures perception – architecture, learning rule. Limitations of multiplayer perception- Back propagation algorithm – learning rule – computer assignments.

#### UNIT-III

Genetic Algorithm: Goals of optimization – Introduction to GA – terminologies. Simple GA- Data structure. Genetic operation – crossover, mutation, fitness scaling, Inversion- A Multi parameter mapped fixed point coding – computer assignments.

#### UNIT-IV

Evolutionary programming: Single and multi objective optimization-general algorithm-Binary GA, Real parameter GA, constraint handling in GA Evolution strategies general programming – computer assignments.

#### UNIT-V

Applications to various branches of Engineering and science- Application of fuzzy, neural, GA and EP in computer science, electrical, communication, instrumentation and control, mechanical and civil engineering.

#### TEXT BOOKS

1. Timothy J. Ross 'Fuzzy logic with Engineer application' McGraw Hill.
2. Martin T. Hagan Howard B.Deruth, Mark Beale 'Neural Network Design' Thompson Learning 1996
3. David E. Gold Berg 'Genetic Algorithm' Pearson Education 2002.  
Multi objective optimization using Evolutionary Algorithm – by Kalyanmoy Deb.  
John Wiley and sons 2002

**UID 052 - INDUSTRIAL ELECTRONICS**  
(Offered by Electrical & Electronics Engineering)

**UNIT – I: THYRISTERS**

SCR – SCR behaviour and rating – phase control of SCR – turn-off of SCR – SCR with resistive load and inductive load – rectifiers with back emf load – TRIAC – TRIAC circuits – phase control of SCR

**UNIT – II: REGULATORS OF VOLTAGE AND MOTOR SPEED**

Voltage compensator – solid state DC voltage regulation – DC shunt motor – armature control and field control of motor speed – electronic control of DC motor – speed regulator action – full wave motor speed regulation by one SCR

**UNIT – III: INDUSTRIAL HEATING**

Induction heating – principles- theory – merits – applications – high frequency power source for induction heating

Dielectric heating – theory – electrodes used in dielectric heating – method of coupling of electrodes to RF generator – thermal losses in dielectric heating

**UNIT – IV: INDUSTRIAL TIMING CIRCUITS**

Constituents of industrial timing circuits – timers – classification of timers – thermal timers – electromechanical timers – electronic timers – classification of electronic timers – digital timing element – digital counters – SCR delay timer – IC electronic timer

**UNIT – V: PROGRAMMABLE LOGIC CONTROLLERS**

Number system and codes – basics of PLC programming – timer and counter instructions – data manipulation instructions – shift register and sequence instructions

**TEXT BOOKS**

1. Frank D. Petruzella, Industrial Electronics, McGraw Hill International Editions, 1996
2. G.K. Mithal, Ravi Mithal, Industrial Electronics, Khanna Publishers, Delhi, 1995
3. George M. Chute, Robert D Chute, Electronics in Industry, McGraw Hill International Editions

### UID 061 - ELEMENTS OF BIOTECHNOLOGY (Offered by Chemical Engineering)

#### UNIT-I

What is Biotechnology, Biotechnology -an interdisciplinary pursuit, public perception of Biotechnology, Biotechnology and the developing world? Classification of micro-organisms, The cell, its organelles and their respective functions, Basic metabolism of cells, DNA – Structure and function, RNA-Structure and function.

#### UNIT-II

Enzyme Technology: Proteins, Protein Structure & Function, Protein –Protein interactions, The nature of enzymes, application of enzymes, Technology of enzyme production, immobilized enzymes.

#### UNIT-III

Biotechnology and Medicine: Introduction, Pharmaceuticals and bio-pharmaceuticals, Antibiotics, vaccines and monoclonal antibodies, gene therapy. Biotechnology and Environment: Introduction, Microbial ecology / environmental biotechnology, waste water and sewage treatment, landfill technologies, composting, bioremediation, microbes and the geological environment, sustainability.

#### UNIT – IV

Genetics And Biotechnology: Introduction, industrial genetics, protoplast and cell fusion technologies, genetic engineering, Introduction to Bio-informatics, potential lab biohazards of genetic engineering, Bioethics.

#### UNIT V

Biotechnology in Agricultural, food and Beverage industries: Introduction, plant biotechnology, diagnostics in agriculture, food and beverage fermentation, speciality fermentation products e.g.: biopolymers, bio-pesticides, miscellaneous microbial derived food products.

#### Text Books/ Reference Books:

1. Shuler, M.L. and F. Kargi. 1992. *Bioprocess Engineering*, Prentice-Hall, Englewood Cliffs, NJ.
2. Bailey, J.E. and D.F. Ollis. 1986. *Biochemical Engineering Fundamentals*, 2nd Ed. McGraw-Hill, New York.
3. Biotechnology by Smith, Cambridge Press.
4. Modern Concepts of Biotechnology by H.D. Kumar, Vikas Publishing House Pvt. Ltd.
5. Elements of Biotechnology by P.K. Gupta, Rastogi Publications.

### UID 062 - INDUSTRIAL POLLUTION ABATEMENT

(Offered by Chemical Engineering)

#### UNIT I

Man and environment, types of pollution, pollution controls aspects, industrial pollution, pollution monitoring and analysis of pollutants, Indian pollution regulations.

#### UNIT II

Water pollution- source of water pollution- measurement of quality- BOD- COD- colour and odor-PH- heavy metals-treatments etc (qualitatively). Industrial waste water treatment (qualitatively) and recycle.

#### UNIT III

Solid wastes- quantities and characterizations – industrial –hazardous waste- radio active waste- simple treatments and disposal techniques (qualitatively treatment).

#### UNIT IV

Air pollution-types and sources of gaseous pollutants-particulate matter-hazardous air pollutants-global and atmospheric climatic change (Green house effect)-acid rain. Industrial exhaust – characterization and Methods of decreasing the pollutants content in exhaust gasses (qualitatively)

#### UNIT V

Noise pollution –sound level-measuring transient noise-acoustic environment-health effects of noise –noise control.

#### **Text books / Reference books:**

- 1.'Environmental pollution and control' J.Jeffrey peirce etl, Butterworth-Heinemann; 4th edition , 1997.
- 2.'Pollution control in Process Industries', S.P.Mahajan, Tata Mc.Graw Hill, 1990.
- 3.'Environmental Pollution Control Engineering', C.S.Rao, New Age International Ltd., 1992.
- 4.'Industrial Air Pollution Engineering', V.Cavaseno, Mc.Graw Hill, 1980.
- 5.'Pollution Control Theory', Martin Crawford, Mc.Graw Hill, 1976.
- 6.'Solid Wastes', Martell, John Wiley, 1975.

**UID 071 - INDUSTRIAL CONTROL SYSTEMS**  
(Offered by Electronics & Instrumentation Engineering)

**UNIT – I**

**INTRODUCTION:** Need for control – block diagram representation of a Control System- mathematical modelling-transfer function and state space modelling-examples in mechanical, electrical, level, pressure and thermal processes –time response analysis of first order and second order processes- stability-self-regulation – servo and regulator operation.

**UNIT – II**

**CONTROL ACTIONS AND CONTROLLERS:** Basic control actions characteristics of on-off, proportional, integral and derivative control modes – P+I, P+D and P+I+D control modes – Tuning of controllers-Finite control elements-valves and actuators-characteristics of control valves – inherent and installed characteristics.

**UNIT-III**

**COMPUTER CONTROL:** Basic building blocks of computer control system – SCADA – Direct Digital Control – AI and expert control systems – Case studies on computer control for Industrial process.

**UNIT-IV**

**PROGRAMMABLE LOGIC CONTROLLERS:** Evolution of PLC's – Sequential and programmable controllers – Programming of PLC – Relay logic – Ladder logic – Functional blocks connecting PLC to computer – Case study of bottle filling system.

**UNIT-V**

**DISTRIBUTED CONTROL SYSTEMS:** Evolution – Different architecture – local control unit – Operator interface – Displays – Engineering interface-DCS applications.

**References:**

1. Stephanopoulos, G., Chemical Process Control, Prentice Hall of India, New Delhi, 1990.
2. Michal P.Lucas, Distributed control systems, Van nostrand Reinhold Co.,1986.
3. Petrezeulla, Programmable Controllers, McGraw Hill, 1989.

**UID 072 - TRANSDUCERS AND INSTRUMENTATION**

(Offered by Electronics & Instrumentation Engineering)

**UNIT – I**

Generalised scheme of measurement-Statistical analysis of measurement data- Mean, Standard deviation-Probability of errors-Gaussian Distribution- Probable error and limiting error Static characteristics of instruments – Accuracy, Precision, Sensitivity, Linearity, Resolution. Hysteresis, Threshold, Input impedance, Loading effects- generalised mathematical model of measurement systems-Dynamic characteristics.

**UNIT-II**

Electronic analog meters-DC and AC Voltmeters, AC and DC bridges- Digital method of measuring frequency, period, velocity. Displacement and speed Display Devices- CRO's - LED'S ,LCD's.

**UNIT – III**

Transducers-Characteristics-Strain gauges-LVDT, Eddy current transducers, Hall effect transducers, Magnetostrictive transducers, capacitive Transducers –Piezoelectric transducers- photoelectric Transducers-Thermo electric transducers.

**UNIT – IV**

Measurement of temperature and Pressure: Manometers ,Bourdon Gauges -Diaphragm, Bellows-Vacuum Gauges- Mcloid Gauge-Knudsen Gauge, Pirani gauge

Temperature scales –resistance thermometers-Thermistors-Thermocouples-Radiation Pyrometer- Types and characteristics

**UNIT-V**

Flow measurement: Differential Flow meters-Operating principle-Different types-Orifice-Rotameter-Mass flow meter-positive displacement meter-Electromagnetic and Ultrasonic Flow meters

Level Measurements: Slight glass flow gauge, Displacer torque tubes ,Bubbler tube, Diaphragm box, D/p methods, resistance <capacitance and Ultrasonic level Gauging Measurement of PH, humidity ,Moisture and Viscosity

**Textbooks:**

1. A course in Electronic measurements and Instrumentation , A.K.Sawhney, Dhanpat Rai & sons,1998
2. Measurement Systems , Application and design, E.O.Doeblin, McGraw Hill,1990.  
Mechanical and Industrial Measurement, R.K.Jain, Khanna Publishers,1996

**UID 081 : INFORMATION TECHNOLOGY FOR ENGINEERS**

(Offered by Information Technology)

**UNIT I**

**INTRODUCTION:**Information Age; Responses – Information system; Infrastructure and Architecture – IT support for organizations; Types of information systems – Managing IT – Basic of computer hardware and software for IT infrastructure- input devices, output devices, memory devices.

**UNIT II**

**COMMUNICATION NETWORKS FOR IT:**Telecommunication system: Networks: LAN, WAN, ETHERNET, Network server, Network software; Network processing strategy; Telecom applications; Network OS; Operation and services provided; ftp, Usenet, Remote login, Telnet.

**UNIT III**

**INTERNET :** Evolution - WWW, Websites, Homepages, Search Engines, URL, Name server, Proxy server, Gateways, Routers, Modem, Switches, Email server, Inter Service Providers, Internet connectivity (VSAT, Leased line, Dial-up line, Radio link) .

**UNIT IV**

**E-COMMERCE AND IT SYSTEMS :** E-commerce: Business applications: Market research and customer support Infrastructure, payments and other support - Planning and Management: Principles for IS planning: Role of IS and user departments; Resources; IT architecture; Centralized and no centralized; Client/server; End user computing architecture; Managing IS; Organizational structure; IS vulnerability; protection; Security; Network Protection and Firewalls Risk management and cost-Benefit analysis.

**UNIT V**

**APPLICATIONS:** Information system; GIS EDI and EFT; Extranets; Implementation; Data, Knowledge and decision support; Decision making- and support systems; Data visualization technologies; Knowledge Management- and Discovery and analysis - AI and Expert systems; Intelligent agents; Virtual reality; Ethical and global issues;

**REFERENCE BOOKS :**

### UID 082 - BIO INFORMATICS (Offered by Information Technology)

#### UNIT I

Coding -Common health care language - coding techniques – coded and quasi coded data Medical vocabulary – industry wide communication standards HL7 – unified medical language system – quality of care paradigms, risk management bioethics.

#### UNIT II

Information networks - Internet – facilities used in the internet web browsers STTP 5, HTTP, HTML, URL – European molecular biology network – national centre for bio-technology information.

#### UNIT III

Patient record maintenance - Electronic patient record – models or ERP – environmental services – metrics – telemedicine – community networks – telemedicine peripherals and equipment selection – anatomy of video conferencing technology.

#### UNIT IV

Basic Genetic Science : Study of cell, nucleus, chromosomes and their components Evaluation of chromosomes, Impact of chromosomes on genes, gene study. Protein information resources - Biological data basics – primary secondary data basics – Protein pattern data basics – DNA sequences data basics - DNA analysis - Genes structure and DNA sequences – interpretation of EST structures – different approach to EST analysis.

#### UNIT V

Alignment techniques - Data base searching - comparison of two sequences– identity and similarity – global and global similarity – global and local alignment- multiple sequence alignment – data basis of multiple alignment – secondary data base. Expert system- Principles of expert system – statistical decision trees – integration of decision support in clinical processors.

**UID 201 - FINITE ELEMENT METHOD**

(Offered by Mathematics)

**UNIT – I (Weighted residual and Variational methods)**

Introduction, Weighted residual methods: Least square, Partition, Galerkin, Moment and Collocation methods. Variational method: Ritz method. (10 Hours)

**UNIT - II (Finite Element method)**

Finite elements: Different types and their functions. Numerical integration over finite elements. Finite Element method: Ritz method, Least square method and Galerkin method. (10 Hours)

**UNIT - III**

Solution of initial value problems for ordinary differential equations and initial boundary value problems for partial differential equations by finite element method. (9 Hours)

**UNIT - IV**

Solution of boundary value problems for ordinary differential equations and partial differential equations by finite element method. (9 Hours)

**UNIT - V**

Solution of some nonlinear differential equations by finite element method. Solution of some practical application problems arising in various branches of engineering. (7 Hours)

**Text Book:**

1. M.K. Jain, Numerical solution of differential equations, Wiley Eastern Limited, New Delhi, 1987.
2. J. N. Reddy, An introduction to the Finite Element Method, McGraw Hill, Singapore, 1985.

**Reference Book:**

1. O.C. Zienkiewicz, The Finite Element Method, 3<sup>rd</sup> Edition, McGraw Hill, 1977.

6. K.W. Morton, Numerical solution of convection-diffusion problems, Chapman and Hall, 1996.

## UIE 202 - COMPUTATIONAL FLUID DYNAMICS

(Offered by Mathematics)

### 1. Classification and finite difference formulations :

Classification: Elliptic, Parabolic, Hyperbolic, System of first order p.d.e and System of second order p.d.e. Initial and boundary conditions, Lax's equivalence theorem,

Finite difference formulations: central, forward, backward differences.

Uniform and non-uniform grids, numerical errors, grid independence test.

### 2. Numerical Solution of Ordinary and Partial differential equations

Runge-Kutta methods, Finite difference methods for O.D.E,

Elliptic: Laplace and Poisson equations. Parabolic: One- dimensional and Two-dimensional heat conduction equations. Hyperbolic: One- dimensional wave equation.

### 3. Incompressible flows:

Governing equations: Primitive variables formulation, Vorticity-Stream function formulation in Cartesian, spherical and cylindrical polar coordinates.

Determination of pressure-by-pressure Poisson equation,

Flow inside a lid-driven cavity, axis symmetric flow past a sphere and cylinder, application of upwind difference scheme.

### 4. Compressible flows:

Governing equations: Euler equations and Burgers equation

Lax-Friedrichs and Lax-Wendroff methods.

Flux splitting method, Riemann solvers, Kinetic schemes, Relaxation schemes.

FTCS, FTBCS, DUFORT-FRANKEL, Mac Cormack (explicit methods)

Mac Cormack, BTCS, BTBCS (implicit methods) for solving inviscid and viscous Burgers equation.

### 5. Heat flows:

Steady heat conduction in rectangular, spherical and cylindrical geometries, Transient heat conduction, steady one-dimensional convection-diffusion equation, Heat transfer in the boundary layer over a flat plate.

**UID 211 -INTRODUCTION TO NANO TECHNOLOGY**

*(offered by Department of Physics)*

**Unit-1: Introduction to Physics of Solid State**

Intermolecular forces: thermodynamic aspects - Quantum Mechanical Treatment of the Many-Particle Problem - Potential Energy Surface - Pair Potential Approximation - Advantages and Limitations of the Pair Potential Approximation - Phenomenological Potentials - Pseudo-Potentials - Many-Body Potentials.

**Unit - 2: Fundamentals of nanoscience**

Size dependence of properties - Particle size determination - Bulk to nano transition - Semiconducting nanoparticles - Carbon nanostructures - Mechanical properties (hardness, ductility, elasticity) - Optical properties of nanotubes - Electrical properties of nanotubes.

**Unit - 3: Preparation of nanosystems.**

Introduction to nanolithography - Carbon nanotubes: preparation - Synthesis and preparation of nanomaterials (crystalline and thinfilm) - Physical and chemical methods - Control and stability (size, shape, composition).

**Unit - 4: Characterization of nanosystems.**

Thermal Stability - Basic Material Properties - Mean Values and Correlation Functions - X-ray diffraction - Scanning Electron Microscopy - Scanning Tunneling Microscopy - Electron Microscopy - X-ray absorption spectroscopy - Photoelectron emission spectroscopy.

**Unit - 5 : Nano-Engineering: Applications**

Nanotubes, nanowires, and nanodevices-introduction - Functional Nanostructures - Introduction to molecular electronics - Field emission and Shielding - Applications in Computers - Applications in fuel cells - Applications in chemical sensors - Applications in mechanical reinforcement - Microelectromechanical systems (MEMs) - Nanoelectromechanical systems (NEMs) - Molecular and Supramolecular Switches.

## UID 212 - Novel and Intelligent Materials

( offered by Department of Physics)

Unit – 1: Introduction to functional materials.

10 hours

Introduction to functional materials - Phase transition and anomalies - Microscopic, mesoscopic, macroscopic phenomena and symmetry - Energy conversion - Examples of functional materials - Thermally responsive materials - Materials responsive to electric, magnetic and stress fields - Increased functionality through (i) Morphotropic phase boundary and (ii) Domain engineering.

### Unit-2 Actuators and adaptronics

10 hours

Definition. of an actuator - Actuator as part of system - Intelligent actuators - Smart actuators - Piezoelectric actuators – Theory -Technical transducers - Comparison with other actuator types - Example applications - Magnetostrictive actuators - Theory of magnetostriction in magnetostrictive actuators - Properties of shape memory alloys - Electrical shape memory – actuators - Innovative applications.

### Unit-3: Rheological fluid and Chemical actuators.

10 hours

Electrorheological fluid actuators - Limitations to the concept of electrorheological fluids - Summary of advantages of ER fluids - Magnetorheological (MR) fluid actuators - Description of MR fluids - Basic MR device design consideration - Linear MR fluid dampers.- Electrochemical actuators: fundamentals - Construction of reversible actuators.

### Unit-4: Nanomaterials

10 hours

Size dependence of properties - Particle size determination - Bulk to nano transition - Semiconducting nanoparticles - Carbon nanostructures - Mechanical properties (hardness, ductility, elasticity) - Optical properties of nanotubes - Electrical properties of nanotubes.

### Unit-5: Fiber optic sensors and Magnetoresistance

10 hours

Physical principle of fiber optic techniques - Types of fiber sensors and sensor selection - Integrating and Quasi-Distributed Long-Gauge-Length sensors-Short-Gauge-Length sensors. – Introduction to magneto-resistance – Giant magnetoresistance – Colossal magnetoresistance – Materials – Perovskite oxides – Applications in spintronics like spin transistor and spin valve.

**UID 221 - INSTRUMENTAL METHODS OF ANALYSIS**  
(Offered by Department of Chemistry)

UNIT I

Electromagnetic radiation – different regions, their wavelengths, frequencies and energies. interaction of electromagnetic radiations with matter – atomic, molecular, electronic interaction. Basic principles of spectroscopy – emission and absorption of radiation. Radiation sources, detectors.

UNIT II

Molecular spectra – UV-visible spectroscopy - principle – UV-visible spectrophotometers – instrumentation techniques. IR spectroscopy – principle, single and double beam IR spectrophotometers – instrumentation techniques.

UNIT III

Nuclear magnetic resonance spectroscopy – basic principles and instrumentation techniques. Principles of ion optics – ion sources, single focusing and double focusing mass spectrometers – principles and instrumentation techniques.

UNIT IV

X-ray fluorescence spectrometry - basic principles and instrumentation techniques. Flame emission and atomic absorption spectroscopy - basic principles and instrumentation techniques.

UNIT V

Electrochemical methods – conductometry, potentiometry, pH meter - principles and instrumentation. Principles of gas and liquid chromatography – gas chromatograph and HPLC - instrumentation.

Text book

1. H.H. Willard, L.L. Merit, J.A. Dean and F.A. Settle, Instrumental methods of analysis, 7 th edition, CBS Publishers and Distributors, New Delhi, 1986.

Reference books

1. D.A. Skoog and D.M. West, Principles of Instrumental Analysis, 2 nd edition, Holt-Saunders, 1980.
2. Brain S. Furniss, Antony J. Hannaford, Peter W.G. Smith and Austin R. Tatchel, Vogel's Text book of Practical Organic Chemistry, 5 th edition, ELBS-Longman, 1996.

## UID 222 - CERAMIC TECHNOLOGY

(Offered by Department of Chemistry)

### Unit I

Nature of ceramic materials-crystalline ceramic materials-silicates and clay minerals and spinal structures-polymorphic transformations-glass and non-crystalline phases-structure and composition of glass-surface and interface-wetting and phase distribution.

### Unit II

Ceramic raw materials-clay materials-silicate and silicate minerals-synthetic raw materials-oxide (like  $\text{Al}_2\text{O}_3$ ,  $\text{ZrO}_2$ ,  $\text{TiO}_2$ ,  $\text{MgO}$ ) and non-oxide (like  $\text{Si}_3\text{N}_4$ ,  $\text{AlN}$ ,  $\text{BN}$ ,  $\text{SiC}$ ) raw materials. Synthetic techniques-sol-gel processing, liquid-phase reaction and hydrothermal synthesis.

### Unit III

Processing of ceramics-powder pressing, extrusion, slip casting, firing-thermal treatment procedure-drying, sintering, annealing-viscosity based transition points in glass-glass forming methods, glass-ceramics.

### Unit IV

An outline of ceramic equilibrium diagrams-one component ( $\text{SiO}_2$ ) two component ( $\text{Al}_2\text{O}_3$ ,  $\text{Cr}_2\text{O}_3$ ,  $\text{MgO-CaO}$ ,  $\text{MgO-Al}_2\text{O}_3$ ,  $\text{Al}_2\text{O}_3$ ,  $\text{SiO}_2$ ,  $\text{Al}_2\text{O}_3\text{-BeO}$ ) and qualitative ideas of methods of representation of three component diagrams-Nucleation-grain growth.

### Unit V

Mechanical properties of ceramic materials-elastic properties and strength-Griffith's theory-plastic and viscous deformations-strengthening of glass. Thermal properties-thermal expansion, heat capacity and thermal conductivity-thermal stresses.

### Text Books:

7. L.H. Van Vlack, Physical Ceramics for Engineers, Addison Wesley, 1964.
